JANUARY 1957

Volume LXI No. 1

ASHEVILLE: 1957

WEATHER SUMMARY

The severe drought conditions that had existed over the State since last November were alleviated somewhat in parts of the central and most of the southern portions beginning on the 4th, when a storm developed off the central and southern California coast bringing substantial rains to the Coastal area from San Diego northwestward to San Jose and extending inland into western Fresno County. The northern half of California received light to moderate precipitation beginning on the 7th. By the 13th -- one of the wettest days of the month in most of the State -- the drought was brought to an abrupt halt in all sections except in parts of the upper San Joaquin Valley and the desert regions. The unusual phenomenon of snow accompanying rain on the night of 27th and early morning of the 28th was experienced in many areas generally along the coast from the San Francisco Bay region southward to just below the Los Angeles area. The foothills surrounding many of the coastal cities were covered with from one to five inches of snow which in many instances did not melt completely until the 29th. It was the first snowfall reported in the Los Angeles and Santa Maria areas since January 1949, and the first in San Francisco since January 1950. Temperatures over the State, with local exceptions, were generally below average for the month. A major contributing factor was the very cold weather that prevailed over the entire western United States during the last week of January. Stations having sunshine recorders showed the percent of possible sunshine to be generally from 10 to 25 percent above average north of the Tehachapis; south of the Tehachapis, where more precipitation fell, it was as much as 23 percent below average. A description of damages resulting from many of the severe storms will be found at the end of this summary.

Temperature anomalies were predominantly negative over the State, -0.1° at Corona to -7.9° at Boca. The greatest negative anomalies appeared to be in a large area adjacent to Lake Tahoe. The coldest weather for the month north of the Tehachapis was observed intermittently during the first ten days when temperatures, according to Weather Bureau Airport stations, dropped to as much as 14° below daily normals, and during the last eleven days when temperatures were as much as 22° below. Bishop remained cool all month as temperatures were generally 5° to 10° below normal and occasionally exceeding 15° below. The lowest temperature in the State was -27° at Boca on the 9th. South of the Tehachapis the coldest weather was usually observed during the last eleven days when temperatures were as much as 15° below daily normals. Mt. Shasta had its fourth coldest January since 1928, and the 2° minimum on the 29th was the lowest observed there since January 1950. Similarly the 26° at Sacramento on the 9th and the 28° at Burbank on the 28th were the lowest of record at both stations since January 1950. At Eureka the 28° on the 29th was the lowest since January 1951. Above normal temperatures were observed statewide generally from the 11th to 17th and south of the Tehachapis intermittently during the first 18 days. The highest temperature was 81° at Yorba Linda on the 2d. Mean monthly temperatures ranged from a high of 56.5° at San Diego Weather Bureau Airport to a low of 9.8° at White Mountain 2. (The White Mountain 2 January report was received too late to be included in this bulletin. It will be published in the "Delayed Data" section of the June 1957 bulletin.)

Precipitation occurred at every reporting station in California, the least being 0.32 inch at Needles CAA Airport. After receiving no rain whatsoever in the entire year of 1956, Ocotillo, in the Southeast Desert Basins, measured 1.62 inches. In the southern half of the State nearly every station in an area south of Santa Maria, along the mountains east of Santa Barbara to the Tehachapis, and thence northnortheastward along the Sierra Nevada range to Bishop reported monthly totals exceeding 100 percent of average. A few of these stations exceeded 300 percent. Except for a few scattered stations in the north half of the State where totals exceeded 100 percent of average, the great majority of stations received totals in the 70 to 90 percent range. Precipitation that began on the 11th at Red Bluff ended a string of 70 consecutive days without measurable rain. The total there from July 1, 1956 to January 31, 1957, was the lowest for any similar period since 1917-18. In contrast, San Diego, an area where considerably below normal rainfall has been observed since January 1956, reported its wettest January since 1943 and the wettest month since March 1952. The mountain stations of southern California reported the heaviest amounts of precipitation in the State. Some localities measured totals exceeding 15 inches, the greatest in the State being 18.83 inches at Big Bear Lake Dam (6,800 feet elevation). The greatest daily catch in the State, 7.34 inches, fell there on the 13th all in the form of rain.

Snow which was nearly non-existent on mountains in California below 10,000 feet by the end of December was very much in evidence by the end of January even at the 5,000-foot level. At Sagehen Creek 77 inches of snow was measured in January, 81 inches at Twin Lakes, and the maximum for the State, 84 inches, at Soda Springs. Greatest depths of snow on the ground were generally observed after the 25th. Some examples include: Huntington Lake 40 inches, Cisco Ranger Station and Soda Springs 60 inches, and in southern California Big Bear Lake Dam 34 inches.

According to the California Weekly Weather and Crop Bulletin, the light to moderate rains were welcomed in alleviating dry conditions that had existed over the State. Besides the immediate benefits to ranges, grains, and crops, the abundant precipitation greatly aided in the building of subsoil moisture, especially in southern California. The soil in San Diego County was reported to be in the best condition in over two years. Winter grains and ranges looked considerably better; however, it was still necessary to give livestock supplemental feed because the cold nights near the end of the month retarded range growth to a certain extent. Much of the small grain crop in the lower Sacramento Valley was too far gone to recover, and it was still too early to determine whether or not the drought-stunted range grasses would recover completely.

Weather Records Processing Center
San Francisco, California

STORMS JANUARY 1957

Heavy rains in southern California from the 4th to 6th resulted in some flooding in the San Fernando Valley and La Tuna Canyon. No major damage was reported.

On the 12th to 14th heavy rains fell in central and southern California and heavy snow fell in the Sierras above 4,000 feet. Some streets were flooded in a few central California towns and some highways were blocked by small slides in the Santa Cruz Mountains. A large tree was blown down across the Seventeen Mile Drive at Pebble Beach in Monterey County, and more than double the normal number of traffic accidents occurred in San Francisco. In southern California underground telephone cables were damaged by a cave-in resulting from flooding of a drain excavation. Another cave-in at Pacific Palisades broke a sewer line. Elsewhere, heavy rains caused storm drains to overflow, and a few mud slides occurred in the Santa Barbara area; some street intersections between Culver City and West Los Angeles were flooded to as deep as 18 inches; and slides with rocks as large as automobiles blocked traffic on Highway 18 between Snow Valley and Big Bear Lake. A severe thunderstorm associated with the passage of a cold front on the 13th developed in the vicinity north of Lincoln in Placer County prior to 2:00 a.m., and in an apparent northeast direction passed between Colfax and Nevada City. A 25 by 45 foot roof section was blown from a barn about six miles north of Lincoln and was carried 150 feet, dropping on a powerline and disrupting power. High winds with gusts estimated at 70 m.p.h. occurred at Grass Valley with the thunder and lightning. Five telephone cables were burned. A home was struck by lightning in Nevada City and another at Meadow Vista. A large locust tree was uprooted at Grass Valley, and several large oak trees were blown down at Auburn.

On the 16th dry north and northeast winds with gusts to 68 m.p.h. were reported in the San Bernardino, Ontario, Fontana, and Chino areas. The roof of a small shed was blown off in San Bernardino.

On the 19th to 20th heavy snow to a depth of two feet closed U. S. Highway 99 for six hours between Redding and Dunsmuir. Heavy snow with high winds closed U. S. Highway 40 over Donner Pass for eight hours. One of two 14 year old boys lost in the snowstorm near Big Bend on U. S. Highway 40 suffered severe frostbite. Two men were overcome with exhaust fumes in a stalled car near Cisco Grove and required hospitalizing. High winds toppled trees, television antennas, and power poles in the Santa Cruz-Watsonville area.

On the 24th to 26th widespread snowfall over northern and central California caused minor traffic accidents. U. S. Highway 101 was blocked by snow north of Cummings in Mendocino County. Two cattlemen, lost in a blizzard in the mountains 30 miles east of Madera, were found on the 29th frozen to death. Moderate rain in the Pasadena area of southern California caused minor traffic accidents. The snow level lowered to 5,000 feet and temporarily blocked the Angeles Crest road. There was also wind damage in the Llano area.

On the 27th to 30th a storm brought snowfall to unusually low levels in central and southern California. Strong to gale force winds also occurred in the mountain passes of

++ FASTEST OBSERVED ONE MINUTE WIND SPEED. THIS STATION IS NOT EQUIPPED WITH AUTOMATIC RECORDING WIND INSTRUMENTS.

WEATHER SUMMARY (Continued)

southern California. Unprecedented snow caused widespread automobile accidents, 300 in Los Angeles County alone; caused three deaths; and numerous injuries. Snow made many roads impassable and caused the closing of 15 schools in Saugus, Newhall, Antelope Valley, and a few in the mountainous area of central California. Accumulations of snow broke branches of some trees in citrus groves near Upland. Streets were flooded by torrential rains in southwest Los Angeles, and snow was heavy enough to break branches from trees in the Woodland Hills area of the San Fernando Valley. Hail fell at Long Beach. Winds tore awnings and battered trees in the Whittier area. Thousands of automobiles and over 200 trucks were stalled on mountain highways during the storm.

Maurice Bergerson
Climatologist
U. S. Weather Bureau
San Francisco, California

REFERENCE NOTES

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

The four-digit identification numbers in the index number column of the Station Index are assigned on a state basis There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in Table 2 and on the maps became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are Temperature in °F., precipitation and evaporation in inches, and wind movement in miles Degree days are based on a daily average of 65° F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Long-term means from which departures are computed are based on 10 years or more of record ending generally with data for 1950.

Long-term means for full-time stations (those shown in the Station Index as 'U. S. Weather Bureau') are based on the period 1921 - 1950, adjusted to represent observations taken at the present location.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Water equivalent samples, as published in Table 7, are necessarily taken from different points for successive observations, consequently occasional drifting and other causes of local variability in the snowpack result in apparent inconsistencies in the record. Water equivalent of snow on the ground is measured at selected stations when two or more inches of snow are on the ground

Data in Tables 3, 5, 6 and snowfall in Table 7, when published, are for the 24 hours ending at time of observation See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations For these stations snow on ground values are at 4 30 a.m., PST, except for Bishop WB AP which is 6 00 a.m., PST; Blue Canyon WB AP and Sandberg WB 6 00 a m., PST.

- No record in Tables 3, 6, 7 and the Station Index No record in Tables 2 and 5 is indicated by no entry Consult the annual issue of this publication for interpolated monthly totals

+ And also on a later date or dates.

• Amounts included in following measurement, time distribution unknown.

Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

// Gage is equipped with a windshield.

AM Data based on an observational day ending before noon.

AR This entry in time of observation column in Station Index means after rain.

B Adjusted to a full month.

C In the "Refer to Tables" column in the Station Index the letter "C" indicates recorder stations. These stations are processed for special purposes and are published later in "Hourly Precipitation Data".

D Water equivalent of snowfall wholly or partly estimated, using ratio of 1 inch water equivalent to every 10 inches of new snowfall.

G In the "Refer to Tables" column in the Station Index the letter "G" indicates Daily Soil Temperatures are published.

M One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in "Hourly Precipitation Data".)

S Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.

SS This entry in time of observation column in Station Index means sunset.

T Trace, an amount too small to measure.

V Includes total for previous month.

VAR This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; 2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

FEBRUARY 1957
Volume LXI No. 2

ASHEVILLE: 1957

WEATHER SUMMARY

A series of storm fronts moving over the central and northern California coastal areas from the 20th to 26th produced moderate to occasionally heavy precipitation, and resulted in strong rises in many rivers. A report from the Meteorologist in Charge of the San Francisco Airport indicated that rains from the storm of the 20th - 21st primed the relatively dry ground over the Russian River basin for runoff from the rains following. The Russian River crested near 31 feet at Guerneville on the 25th, about 2 feet above flood stage, causing minor flooding in the resort area. Minor agricultural flooding was also reported in the vicinity of Geyserville and the Alexander Valley area above Healdsburg, although established flood stages were not reached at Hopland and Healdsburg. A description of some of the storms over the State will be found at the end of this summary. The Meteorologist in Charge at Eureka reported that the Eel River began rising on the 24th slowly reaching a crest of 19.3 feet about 8:00 a.m. of the 25th. The river then receded slowly, falling below flood stage about 6:00 p.m. of the 25th. Several thousand acres of farmland were under water at the peak of the flood. Damage from the flood was mainly debris deposit and bank erosion. The high incidence of cloudiness associated with the many storm passages over the State and resulting warm nights was responsible for individual mean monthly temperatures being higher than the usual February expectancy.

Mean monthly temperature departures were positive at all stations, especially in southern California where they were up to +10.6° at El Centro 2 SSW. The coldest weather statewide occurred during the first few days, continuing a trend begun the last week of January. Every reporting station in the State except Avalon Pleasure Pier on Catalina Island, recorded their lowest minimums during the period 1st to 5th. The lowest was -26° at Boca on the 3d. The rest of the month, with local exceptions, was warmer than usual with temperatures, as shown by Weather Bureau Airport stations, as high as 16° above daily normals north of the Tehachapis and as much as 20° above south of the Tehachapis. Highest maximum temperatures were generally observed either during the period 12th to 17th or 24th to 26th; the highest in the State being 95° at Indio U. S. Date Garden on the 13th. This was only the third time since 1921 that any station in California has had a maximum temperature exceeding 94° in February. Both Burbank and San Diego indicated this to be the second warmest February of record. Mean monthly temperatures ranged from a low of 18.3° at White Mountain 2 to a high of 65.1° at Cow Creek.

Despite relatively numerous days throughout the month with precipitation, especially in northern and much of central California, monthly totals were generally not excessive as only three sections - an area south of Mt. Shasta, along the Sierras from about Strawberry Valley southward to the vicinity of Blue Canyon, and in the area from Healdsburg to Cordes -- received on an average of from 100 to 150 percent of their usual February expectancy. The rest of the State received near to considerably less than average. In southern California less than 70 percent of average fall was the rule, and a large majority of these stations received less than 50 percent. The period 23d - 26th appeared to be the wettest over the State when daily catches exceeding two inches were common. Four stations, all in northern California, measured daily catches exceeding six inches on the 24th -- Cordes 6.32; Lakeshore 6.45; Vollmers 7.13; and the greatest for the month, 7.30 at Strawberry Valley. Monthly totals in excess of twenty inches were measured at two stations, Lakeshore 20.02, and Strawberry Valley 21.52, the greatest in the State. This was the wettest February since 1942 at Blue Canyon and since 1945 at Sacramento. On the other hand, no precipitation fell all month at Brawley and Coyote Canyon, both in the southeastern desert area.

Since most of the storms entered the State from the southwest, the relatively warm air associated with them raised the snow level, in many instances, to above the 6,000-foot mark. Mountain stations reported their maximum depths in most cases during the early part of the month. Toward month's end Donner Memorial State Park had 27 inches on the ground compared to its maximum depth of 50 on the 9th, Cisco Ranger Station had 30 inches on the ground compared to a maximum depth of 58 on the 8th, Soda Springs had 50 inches compared to 60 on the 9th and 10th, and Twin Lakes had 54 inches compared to 60 inches on the 24th. Snowfall was a little lighter this month than in January with the two highest monthly falls being 51.0 inches at Soda Springs and 60.5 at Twin Lakes.

According to reports of the State Climatologist at San Francisco and reports of the California Crop and Livestock Reporting Service, cold weather and frost during the beginning of the month in the north and central coastal areas and parts of the Sacramento and San Joaquin Valleys continued to retard vegetative growth, but no serious damage was reported. The intermittent rainy periods and warmer weather over the State the rest of February stimulated growth of all grasses and crops, and greatly aided the development of buds on all fruit trees. The soil was sufficiently saturated to allow considerable runoff into reservoirs. This situation was very prevalent in Los Angeles and Santa Clara Counties where heavy local irrigation is practiced. Rains and wet ground did delay cultivation and spraying activities in the northern counties, and caused considerable damage to broccoli and cauliflower from bacterial soft rot in the Santa Maria area. The snow pack in the higher mountains was only fair as the accumulation was below normal. However, spring pasture prospects are good now despite the very dry fall season. The average condition of range and pasture feed at 73 percent was four points below February 1956, but still three points above the 1946-55 average. Little seasonal improvement was noted in cattle since they did not have full access to pastures due to wet soil conditions. The reported condition of cattle at 78 percent was one point below both that of February 1956 and the 10-year average.

Climatologist
Weather Records Processing Center
San Francisco, California

STORMS, FEBRUARY 1957

One of a series of storm systems (20th - 28th) originating over the eastern Pacific Ocean and moving across the State accompanied by strong winds and heavy rain caused extensive flood damage in the Los Angeles area and wind damage in the Santa Barbara, Carmel, and San Francisco Bay areas the night of the 22d. Communities principally affected in southern California were West Los Angeles, Glendale, Burbank, Santa Monica, Inglewood, Torrance, Pasadena, Hollywood, Whittier, Terminal Island, and Santa Barbara. Intersections were flooded by from 5 to 12 feet of water; many parked cars were flooded and swept out into the streets; basements, business establishments, and homes were flooded. Hollywood Freeway traffic was halted, and hillside roads and streets were blocked by mudslides, debris, and water. In Burbank 150 autos were stalled in the streets, and an auto trailer court was awash. Thousands of dollars of damage in all was caused to a motion picture studio in Glendale, a sporting goods store in West Los Angeles, and to four racing sloops at Terminal Island which were blown aground. In Santa Barbara County utilities were interrupted in various areas, and in Santa Barbara harbor a sailing schooner was washed ashore. In the San Francisco Bay area several pleasure craft were damaged in the various harbors, utilities disrupted in local areas, and numerous trees damaged or blown over. Some store windows were blown out in San Jose, and 33 false burglar alarms were set off by wind in San Francisco. Many large trees were blown down along the central California coast. Auto accidents, attributed to wet pavement, injured many, and killed four persons in Long Beach, one in West Los Angeles, one in the San Fernando Valley, one on the Salinas-Monterey highway, and one in San Benito County. A woman was killed south of Carmel on the 23d when wind toppled a large tree onto an auto, and one man was killed near Cupertino due to a rain-loosened earthslide at Permanente Quarry.

U. S. Highway 101 near Willits was closed by a mudslide; U. S. Highway 40 was closed near Oroville by water; and the Moraga highway near Orinda was partially closed by a landslide. Minor flooding occurred along the Russian River near Geyserville, the Alexander Valley, and at Guerneville the morning of the 25th. Minor flooding was also reported in Humboldt County the morning of the 24th, with a preliminary American Red Cross report listing minor damage to 5 homes.

In the Los Angeles area thunderstorms and rain during the night of the 28th flooded streets, autos, business establishments, and residential areas. Over 20 utility pole fires were started by lightning. Some communities affected were Culver City, Manhattan Beach, San Fernando, Torrance, North Hollywood, Hawthorne, Fontana, and San Marino. Elsewhere, San Marcos Pass, near Santa Barbara, was closed by a rockslide, and in San Bernardino some streets were flooded as overflowing creeks dumped debris into residential areas.

REFERENCE NOTES

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in Table 2 became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F, precipitation and evaporation in inches, and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Long-term means from which departures are computed are based on 10 years or more of record ending generally with data for 1950.

Long-term means for full-time stations (those shown in the Station Index as "U. S. Weather Bureau") are based on the period 1921 - 1950, adjusted to represent observations taken at the present location.

Water equivalent values published in Table 7 are the water equivalent of snow, sleet or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations, consequently occasional drifting and other causes of local variability in the snow pack result in apparent inconsistencies in the record.

Entries of snowfall in Tables 2 and 7, and in the Seasonal Snowfall table include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in Tables 3, 5, 6, and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. The Station Index lists observation times in local standard time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and C. A. A. Stations. For these stations snow on ground values are at 4:30 a.m. PST, except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB which are taken at 6:00 a.m. PST.

- \- No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. Consult the annual issue of this publication for interpolated monthly precipitation totals.
- \+ And also on a later date or dates.
- * Amount included in following measurement, time distribution unknown.
- \# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground, however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.
- // Gage is equipped with a windshield.
- AM Data based on an observational day ending before noon.
- AR This entry in time of observation column in Station Index means after rain.
- B Adjusted to a full month.
- C In the "Refer to Tables" column in the Station Index the letter "C" indicates recorder stations. These stations are processed for special purposes and are published later in "Hourly Precipitation Data".
- D Water equivalent of snowfall wholly or partly estimated using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
- G In the "Refer to Tables" column in the Station Index the letter "G" indicates Daily Soil Temperatures are published.
- M One or more days of record missing, if average value is entered, less than 10 days' record is missing. See Table 5 for detailed daily record. Degree day data (if carried) for these station have been adjusted to represent the value for the full month.
- R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in "Hourly Precipitation Data".)
- S Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.
- SS This entry in time of observation column in Station Index means observation made near sunset.
- T Trace, an amount too small to measure.
- V Includes total for previous month.
- VAR This entry in time of observation column in Station Index means variable.

MARCH 1957
Volume LXI No. 3

ASHEVILLE: 1957

WEATHER SUMMARY

The series of storm fronts that were passing over the State during the last week of February continued on into March. Generous amounts of precipitation were recorded in northern California during the first twelve days and intermittently the rest of the month. Despite this high frequency of occurrence, the character of the precipitation was such that flooding was kept to a minimum. As a result reservoirs were filled and there was an increase in the supply of underground moisture. However, south of the 37° parallel the benefits were not realized to this extent as rainfall was somewhat below the usual March expectancy. Many of the storm fronts produced little or no rain, but instead strong, dry northerly winds. A description of the damages attributed to windiness and locally heavy rains will be found at the end of this summary. The temperature pattern over the State was close to normal although a little on the warm side. Probably the outstanding phenomenon for the month was not attributable to weather, but to a rather severe earthquake that struck the San Francisco Bay Area and vicinity on the 22d and early morning hours of the 23d causing considerable damage to structures and roads, especially in the Lake Merced - Daly City area.

Mean monthly temperature departures were not excessive, remaining generally in the -0.5° to +2.5° range, the higher positive values occurring in southern California. The extremes in anomaly ranged from -4.0° at Avalon Pleasure Pier to +7.7° at Bridgeport Dam. Statewide daily temperature departures, with some exceptions, were above average during the first ten days, up to 16° above, due for the most part to the amount of cloudiness associated with the storms that held minimum temperatures relatively high. Colder weather set in north of the Tehachapis from the 12th to 18th, 21st to 23d, and again from the 30th to 31st, during which periods temperatures were as much as 13° below average. The lowest temperature in the State, -8°, was recorded at both White Mountain 1 and White Mountain 2 on the 22d. South of the Tehachapis below-average daily temperatures were noted generally from the 16th to 18th and in some areas from the 20th to 23d, dropping to as much as 12° below average. The lowest temperature recorded in this section was 15° at Table Mountain on the 22d. The remaining periods of March were near or up to 12° above average statewide. Both El Centro 2 SSW and Brawley reported the highest temperature for the month, 93°, the former on the 8th and 25th and the latter on the 8th and 9th. Mean monthly temperatures ranged from a high of 71.2° at Cow Creek to a low of 15.7° at White Mountain 2.

In spite of the numerous days with precipitation in the northern half of the State, only a few areas along the northwestern coast and on or in the vicinity of the windward side of the Sierras mostly north of the 39° parallel, measured monthly totals exceeding 100 percent of their March averages. Most of the precipitation fell either during the first twelve days or on the last few days of the month. Eureka reported 21 days with measurable rain, but on only two of them did the daily catch exceed an inch. This was also Eureka's wettest March since 1938. Klamath reported both the greatest monthly total, 23.27 inches, and the greatest daily catch, 4.70 inches, on the 11th. Other stations measuring monthly totals exceeding twenty inches were Crescent City 7 ENE, 20.85, and Gasquet Ranger Station, 21.71. South of the Tehachapis the greatest monthly fall was 3.92 inches at Somis 3 NE which also received the greatest 24-hour fall, 2.81 inches, on the 1st. A few scattered thunderstorms were reported in various areas of the State accompanied locally by hail. No precipitation fell all month at either Brawley or Coyote Canyon, and only a trace was observed at scattered points in the San Joaquin Valley, east of the Sierras, and in the desert basins. Snowfall was below average for this time of the year at mountain stations, especially in the mountains of southern California. Soda Springs had 44 inches on the ground by month's end compared to its March maximum of 63 inches on the 16th. Twin Lakes' maximum depth of 73 inches on the 16th was reduced to 62 inches by the 31st.

According to reports from the California Weekly Weather and Crop Bulletin and reports of the California Crop and Livestock Reporting Service, the general rains and mild weather throughout most of the State resulted in continued rapid development of range and pasture feed. The warm weather and rainy periods favored agriculture in general in the Sacramento Valley and north and central coastal counties, as grains, pastures, and cover crops made excellent growth. The dry, warm periods between rains were beneficial in permitting bees to work well in almonds and apricots. However, the weather was also conducive to the advancement of brown rot and shot hole in almonds and apricots; and spraying, leveling, and plowing were hampered or stopped by the wet ground. Growing areas over the rest of the State also far well with from light to occasionally moderate rainy perio followed by drying conditions. However, lack of adequa moisture in the southern half during the last decade of t month was being felt as grain began to burn in the San Maria area, soil moisture was being rapidly depleted by dr ing winds and above normal temperatures in the Los Angel area, and winds caused some damage, mostly to melon vine in Imperial County. Springtime pests were also plagui growers, and spraying activities were somewhat hampered d to the rainy periods. Below freezing temperatures and sc frost in the upper San Joaquin Valley on the 13th and 14 and in the higher foothill areas in the Sacramento Vall on the morning of the 22d damaged some fruit trees that h already begun to blossom.

Below normal snowfall in the higher ranges presaged possible shortage of summer stock water. Drying winds h also dissipated part of the moisture supply. Prospects f spring and summer feed were still good although the S Joaquin Valley as well as the central and southern coast areas will need more rain to prevent feed from maturi short. The average condition of range and pasture feed 84 percent was 12 points above March 1956, and 11 poir above the 1946-55 average. Cattle were generally in gc condition and made good gains. However, there will be fe early grass fat beef cattle in some areas due to the ea lier shortage of natural feed. The reported condition f cattle and calves at 82 percent of normal was 4 points abc March 1956, and 2 points above the ten-year average.

San Francisco, California

STORMS, MARCH 1957

On the 8th to 10th, a steep pressure gradient behin a storm front caused locally strong winds over much of t State. Light to moderate rains occurred in northern d central California with scattered thunderstorms in the c tral Sierras, and locally heavy rain in the Los Angeles d San Bernardino County areas. Gusty winds reached 41 m.p at San Francisco Airport, and winds in excess of 30 kn occurred at Pt. Arguello and Pt. Piedras Blancas. Mi damage occurred in San Bernardino and in the nearby El Gulch area from local flooding.

On the 11th strong winds blew trees down across highw and power and telephone lines near Hatchett Mountain Shasta County. Winds reached 43 m.p.h. at Red Bluff.

On the 15th to 16th light rains in central Califor coastal areas caught apricot blossoms at a critical sta and may result in a crop reduction. Brief, but torrent rain in the southern California coastal area caused tem rary flooding in the San Fernando Valley and several mi mud slides on the coast highway north of Santa Monica. Wi reaching speeds up to 70 m.p.h. caused extensive dam to Hoover Dam powerlines in an area 13 miles north Needles.

On the 19th strong gusty winds blew down a large oak t in Santa Barbara breaking telephone lines.

On the 21st to 22d strong Santa Ana-type winds with gu 36 to 52 m.p.h. were reported in the southern Califor coastal basin. About 80 trees were uprooted, and 6 ho and 3 parked cars were damaged by falling trees. Powerli were down over a widespread area, and streets were litte with debris requiring a major cleanup job. At Culver C a 6,000 lb. aluminum canopy shed, 80 ft. by 40 ft., blown a distance of 60 feet into a vacant lot. Several ol trees were uprooted in the San Bernardino area.

On the 29th a steep pressure gradient behind a st front caused strong northerly winds in the lower Joaquin Valley on the 30th and in the Mojave Desert on 30th and 31st. Strong winds at Lindsay in Tulare Cou blew down several television antennas on the 30th. Edwa Air Force Base, near Lancaster, reported winds of 80 m.p on the 31st. The cooperative observer at Lancaster repor the instrument shelter was blown over and all thermomet broken.

REFERENCE NOTES

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist 557 Federal Office Building, 50 Fulton Street San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in Table 2 became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Long-term means from which departures are computed are based on 10 years or more of record ending generally with data for 1950.

Long-term means for full-time stations (those shown in the Station Index as "U. S. Weather Bureau") are based on the period 1921 - 1950, adjusted to represent observations taken at the present location.

Water equivalent values published in Table 7 are the water equivalent of snow, sleet or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations, consequently occasional drifting and other causes of local variability in the snow pack result in apparent inconsistencies in the record.

Entries of snowfall in Tables 2 and 7, and in the Seasonal Snowfall table, include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in Tables 3, 5, 6, and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. The Station Index lists observation times in local standard time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and C.A.A. Stations. For these stations snow on ground values are at 4:30 a.m. PST, except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB which are taken at 6:00 a.m. PST.

- No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. Consult the annual issue of this publication for interpolated monthly precipitation totals.

\+ And also on a later date or dates.

* Amount included in following measurement, time distribution unknown.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

// Gage is equipped with a windshield.

AM Data based on an observational day ending before noon.

AR This entry in time of observation column in Station Index means after rain.

B Adjusted to a full month.

C In the "Refer to Tables" column in the Station Index the letter "C" indicates recorder stations. These stations are processed for special purposes and are published later in "Hourly Precipitation Data".

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

G In the "Refer to Tables" column in the Station Index the letter "G" indicates Daily Soil Temperatures are published.

M One or more days of record missing, if average value is entered, less than 10 days' record is missing. See Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in "Hourly Precipitation Data".)

S Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace, an amount too small to measure.

V Includes total for previous month.

VAR This entry in time of observation column in Station Index means variable.

Subscription Price 20 cents per copy, monthly and annual, $2.50 per year (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CALIFORNIA

APRIL 1957
Volume LXI No. 4

ASHEVILLE: 1957

WEATHER SUMMARY

The weather picture over California during April showed temperatures to be near average and precipitation to be near or, in most instances, slightly above average. On the 1st most of southern California was hit by strong winds near gale force following the passage of a strong weather front on March 31. Los Angeles Airport reported gusts to 59 m.p.h., Sandberg 71, Burbank 44, Van Nuys Airport up to 50, Antelope Valley 60, Santa Monica Pier 40, Del Rosa 60, and Camp Del Mar 40. The winds were reported to have generated one of the worst duststorms in ten years in the Mojave Desert, closing U. S. 99 near Indio for several hours. During the remainder of the month three storms of major proportions were reported over sections of the State resulting in local downpours, gusty winds, hail, and the usual powerline and antenna damage. Details of these storms will be found following this summary. The rains brought seasonal improvement in range and pasture conditions, but occurred a little late to be of maximum benefit to pastures that had pretty well matured in the San Joaquin Valley and parts of the Sacramento Valley. The U. S. Geological Survey reported that runoff continued to be deficient in the section from southern California northward to the Central Valley, and water levels were at or near record-low levels for April in southern California. The prospect was for below-normal snowmelt as the high mountain snowpack remained deficient.

Mean monthly temperatures were near average statewide with most stations having departures in the -3.0° to +1.5° range; the greater number of negative departures occurring south of the Tehachapis. Extremes of anomaly ranged from +4.1° at Santa Clara University to -4.8° at Avalon Pleasure Pier. With some exceptions, the first ten days of April were relatively warm over the State when daily temperature departures were up to 14° above average. Cooler weather set in by the 11th in the northern part and spread over the rest of the State by the 16th, persisting generally through the 24th. Temperatures dropped to as much as 18° below average during this period. During the last five days the weather warmed considerably in the northern sections under the influence of dry, northerly winds with temperatures rising to as much as 16° above mean daily averages. On the 28th and 29th maximum temperatures were near or slightly above 90° in the San Francisco Bay Area and in the lower interior valleys. Days of highest maximums varied over the State, but the most consistent period was from the 28th to 30th. The 100°-reading at Greenland Ranch on the 29th was the high for the State. Lowest minimum temperatures were, to a great extent, observed during the first ten days, and south of the Tehachapis more often from the 21st to 23d. White Mountain 2 recorded the month's lowest, -1°, on the 2d. Mean monthly temperatures ranged from a high of 78.6° at Greenland Ranch to a low of 20.2° at White Mountain 2.

North of the Tehachapis most of the monthly precipitation was measured during the period 12th to 21st, and south of them from the 17th to 23d. Fortunately, except in local areas, the lack of widespread heavy rain held flooding down to a minimum. A large number of stations throughout the State received totals ranging from near average for April to 150 percent of average. A severe rain squall passed over San Francisco around 1:00 p.m. the 17th causing an abrupt pressure jump, a rapid temperature drop, gusty winds, and a heavy, brief shower. Hailstones reported to be the size of marbles were seen in parts of San Francisco and Berkeley. Two stations received monthly precipitation totals in excess of six inches -- Vollmers 6.27 inches, and the greatest total statewide, 6.63 inches at Lakeshore. The greatest daily catch, 3.50 inches, fell at Salinas Dam on the 18th; on the other hand, 14 stations, all in the desert basins of southern California, reported no measurable precipitation.

Snow fell at higher elevations generally during the period 14th to 23d, but total fall was not excessive. The greatest monthly fall, 28.5 inches, occurred at Twin Lakes and the greatest daily catch, 16 inches, was measured at Grant Grove on the 18th. Twin Lakes still had 39 inches of snow on the ground by month's end; however, little or none was generally left at any other reporting station.

According to reports from the California Weekly Weather and Crop Bulletin and from the California Livestock and Range Report, warm weather during the first decade of the month accelerated the growth of most crops, but the lack of adequate moisture and local drying winds began to be of concern in small grain crop, pasture, and range areas. Windiness also curtailed spraying operations. Rain was badly needed in San Luis Obispo, Santa Barbara, and San Diego Counties where meadows began to deteriorate. Rains during midmonth over most of California greatly benefited the moisture situation and increased water reservoir storage for future irrigation. These relatively late rains were detrimental to some crops, especially strawberries. Extensive damage was reported to the strawberry crop in the Fallbrook and San Luis Rey areas near San Diego where only about 25 percent were left marketable. In general, however, April weather was favorable to most crops throughout the State despite local damages from frost, gusty winds, and the threat of the usual springtime pests.

Although windiness, especially early in the month, caused some deterioration, ranges and pasture feed continued to improve during the month. The average condition at 85 percent by month's end was five points above April 1956 and seven above the 1946-55 average. Cattle and calves were generally in good condition for this season of the year as good pastures during March and April had gone far in offsetting the short range feed supplies of last fall and winter. The reported condition of cattle and calves at 85 percent was two points above both April 1956 and the ten-year average.

Weather Records Processing Center
San Francisco, California

STORMS, APRIL 1957

Strong northerly winds on the 1st over the State following the storm of March 31 reached gale force in much of southern California, causing widespread minor damage. Los Angeles police reported 150 trees and many powerlines blown down, and about 20 homes and 15 autos damaged by falling trees and limbs. At El Segundo a church steeple under construction was downed and a dwelling roof was torn off, slate was torn from a roof in North Hollywood, many avocados were blown from trees in the Vista area, windows were broken in Lancaster, a yacht was disabled off San Pedro, and two trailers were blown over at Mojave. Five persons were injured by winds -- one in Los Angeles, one in Hollywood, and three in Glendora.

A strong storm front moved rapidly eastward across California from the 13th to 15th causing rain and gusty winds along the coast. Ukiah measured 1.93 inches of rain during the six-hour period from 4:30 p.m. to 10:30 p.m. on the 13th. Severe local winds were reported near Crescent City the night of the 13th which caused considerable damage to the Curly Redwood Motel on U. S. 101, mainly to carports under construction.

A severe rain squall that passed over San Francisco from 12:57 p.m. to 1:04 p.m. on the 17th caused damage mainly along a southwest-northeast path from Hunters Point across San Francisco Bay to El Sobrante north of El Cerrito. A generator shed was blown apart at Hunters Point, two radio towers were felled on the east shore, a hole was blown in the roof of an industrial plant, several warehouse buildings roofs were blown off, windows were broken, dwelling roofs and television antennas were damaged, some streets and basements were flooded as storm drains temporarily clogged and autos were damaged by falling branches. Lightning struck a power pole and transformer in Alameda temporarily blacking-out homes and businesses. One fatality occurred at Redwood City when a construction worker picked up a downed powerline and was electrocuted.

A storm caused heavy downpours in the Los Angeles-San Bernardino area and nearby mountains on the 20th, followed by thunderstorms, lightning, and some hail on the 21st. Rains on the 20th flooded several streets and intersections in Los Angeles. Snow fell in the mountains requiring the use of chains on higher roads. Hail was reported covering lawns and sidewalks in El Sereno on the 21st. Lightning caused power outages and damaged powerlines of the California Edison and California Electric Companies.

REFERENCE NOTES

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in Table 2 became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are Temperature in °F, precipitation and evaporation in inches, and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6

Long-term means from which departures are computed are based on 10 years or more of record ending generally with data for 1950.

Long-term means for full-time stations (those shown in the Station Index as "U. S. Weather Bureau") are based on the period 1921 - 1950, adjusted to represent observations taken at the present location

Water equivalent values published in Table 7 are the water equivalent of snow, sleet or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations, consequently occasional drifting and other causes of local variability in the snow pack result in apparent inconsistencies in the record.

Entries of snowfall in Tables 2 and 7, and in the Seasonal Snowfall table, include snow and sleet. Entries of snow on ground include snow, sleet, and ice

Data in Tables 3, 5, 6, and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. The Station Index lists observation times in local standard time

Snow on ground in Table 7 is at observation time for all except Weather Bureau and C.A.A. Stations. For these stations snow on ground values are at 4:30 a.m. PST, except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB which are taken at 6:00 a.m. PST.

- No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. Consult the annual issue of this publication for interpolated monthly precipitation totals.

+ And also on a later date or dates

• Amount included in following measurement, time distribution unknown.

Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

// Gage is equipped with a windshield.

AM Data based on an observational day ending before noon.

AR This entry in time of observation column in Station Index means after rain.

B Adjusted to a full month.

C In the "Refer to Tables" column in the Station Index the letter "C" indicates recorder stations. These stations are processed for special purposes and are published later in "Hourly Precipitation Data".

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

G In the "Refer to Tables" column in the Station Index the letter "G" indicates Daily Soil Temperatures are published.

M One or more days of record missing, if average value is entered, less than 10 days' record is missing. See Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in "Hourly Precipitation Data".)

S Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace, an amount too small to measure.

V Includes total for previous month

VAR This entry in time of observation column in Station Index means variable.

Subscription Price 20 cents per copy, monthly and annual, $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

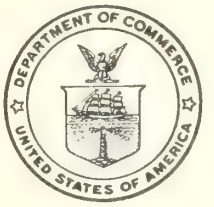
CLIMATOLOGICAL DATA

CALIFORNIA

MAY 1957
Volume LXI No. 5



ASHEVILLE: 1957

WEATHER SUMMARY

The unusually high incidence of relatively strong storm fronts which passed over the State made this May one of the three wettest in California's climatological history. Most of the precipitation fell during the period 8th to 23d during which time stations in the northern two-thirds of the State received some precipitation daily. However, many stations in the rain shadow east of the Sierras and in the southeastern portion of California received less than their May long-term values. There were numerous local thunderstorms and hail reported at many locations; even a tornado was seen near Fresno on the 19th. A description of many of the storms which plagued the State during the month will be found at the end of this summary. Mean temperatures for the most part were slightly on the cool side, due more to the occurrence of low maximums rather than to any extremely low minimums. The percent of possible sunshine, as shown by stations having recorders, tended to be lower than average, especially north of the Tehachapis.

Mean monthly temperature departures were most often negative statewide, with the greatest negative departures occurring in the South Coast Drainage and Southeast Desert Basins. Extremes in anomaly ranged from +3.0° at Orleans to -7.0° at Idria. Most coastal stations had mean daily temperatures which generally fluctuated from -4° to +6°, whereas interior stations showed greater variability with a more pronounced pattern. Warm weather was prevalent from the 3d to 6th and again during the last six days, during which periods nearly every station recorded their highest daily maximums. The greatest daily departure was 13° at Oakland on the 4th. The highest temperature statewide was 110° at Cow Creek on the 31st. Cooler than usual weather was prevalent mostly during the wet period of the 8th to 23d when departures reached as much as 20° below average at Blue Canyon on the 20th. Lowest minimums, however, occurred during various days of the month, the lowest being 5° at White Mountain 1 on the 14th. Mean monthly temperatures ranged from a high of 82.8° at Cow Creek to a low of 23.7° at White Mountain 2. (The May reports from White Mountain 1 and White Mountain 2 were received too late to be included in this publication, but will be found in the Delayed Data section of the June 1957 publication).

Nearly nine-tenths of the stations in California with long-term averages received monthly precipitation totals in excess of 100 percent of average, and of these, totals exceeding 300 percent were not uncommon, especially in the central and northern portions. Blue Canyon and Oakland reported this to be their wettest May of record, San Francisco had its third wettest May since records began in 1850, and Mt. Shasta had its fourth wettest since 1898. Greatest daily catches statewide were measured generally during the period 18th to 20th -- generally exceeding 0.75 inch in southern California coastal valleys and mountains, 1.30 inches in northern and central sections, and 4.00 inches along the mountains in northern and central California. The greatest 24-hour catch was 6.32 inches at Giant Forest on the 19th. A few areas north of the Tehachapis received monthly totals greater than 10 inches. (See Precipitation map near the end of this publication for areal distribution). The greatest total was 12.05 inches at Vollmers. The greatest total south of the Tehachapis was 6.64 inches at Squirrel Inn 1. Nineteen stations, all in the Southeast Desert Basins, received no measurable precipitation all month.

The U. S. Geological Survey indicated that runoff was well above median in the Sacramento River basin and in the coastal basins north of San Francisco. In the south San Joaquin Valley, where snowmelt was somewhat delayed by below-normal temperatures, runoff was generally less than median, although minor flooding occurred in the Kaweah River basin on the 18th. The area of deficient runoff decreased in southern California, but storage in most reservoirs remained low.

According to the California Livestock and Range Report and the California Weekly Weather and Crop Bulletin, the extended rains were beneficial to range and pastures over most of the State with considerable improvement being noted in the higher and upland pastures. The overall pasture and range condition at 89 percent was the best since 1952 and 9 points above the 1947-56 average. Livestock were doing well on the better than average pastures and ranges. The reported condition of cattle and calves at 85 percent was a few points above both May 1956 and the 10-year average. The relatively heavy rains throughout most of California caused considerable damage to strawberries, and in addition, caused splitting of ripe cherries, contributed to fungus diseases in stone fruit and nuts, interferred with the pollination of the walnut crop, and was conducive to the advance of brown rot in peaches. However, warmer weather which set in during the last few days, especially in southern California, accelerated all growth. Windiness and cool weather contributed toward the lessening of insect activity in Imperial Valley, but was also unfavorable for crops when strong winds caused severe damage to cotton seedlings. In general the weather during May (with some exceptions) was favorable to all agricultural activity.

Weather Records Processing Center
San Francisco, California

SEVERE STORMS, MAY 1957

On the 10th to 11th moist, unstable air from the ocean with a low center off the coast caused numerous thunderstorms. Hail fell at Bridgeport Dam in Mono County, in the San Fernando Valley and in adjacent foothills of Los Angeles County, and in the Julian area of San Diego County. Rains locally of cloudburst intensity flooded some streets in southeast Los Angeles and on the Coast Highway near Dana Point. Lightning struck several telephone and power poles and two transformers in Huntington Park, and also struck two houses injuring a woman. A funnel cloud was observed by a pilot and base weather station personnel on the 10th 10 to 12 miles northeast of Hamilton Air Force Base. The lower extremity of the funnel was well above the ground.

On the 13th to 14th widespread thunderstorms, hail, and locally strong winds occurred from the Oregon border to southern California, with highest incidence in the central Sierra and lower San Joaquin Valley. Dudleys reported its heaviest thunderstorm in years, and a severe thunderstorm at Auberry caused a two and a half hour power failure on the evening of the 13th. Considerable fruit was damaged by hail locally in areas of Madera, Fresno, Kings, and Tulare Counties, and grape vines were stripped by hail, reported to be the size of golf balls, in the area southwest of Fresno. Lightning struck a cable leading into the tunnel at the site of Haas Power House project in Fresno County setting off dynamite which killed one man and partially deafened another. A rancher four miles west of Kerman in Fresno County lost over 6,000 turkeys during a hailstorm. Howling winds toppled more than 50 trees in various sections of Los Angeles, one crushing three unoccupied automobiles. Unconfirmed newspaper reports told of a series of waterspouts off the coast near Oceanside.

On the 17th to 19th a storm front moving southeastward across California followed by moist, unstable air brought record or near-record May rains to north and central coastal areas, widespread thunderstorms, hail, and high winds in the northern mountain ranges, central Sierras, and lower San Joaquin Valley, and locally heavy rains and high winds in southern California. Heavy rains caused damage to strawberries and cherries in Santa Clara County and to strawberries in Santa Cruz County. At Santa Cruz rain-swollen waters on the San Lorenzo River destroyed a coffer dam while in nearby Soquel, the Soquel Creek washed out earth fill used as a temporary crossing during the bridge construction. A cloudburst sent a five foot wall of water down Uvas Creek in Santa Clara County, washing out a small coffer dam. Earthslides threatened two homes in Mill Valley in Marin County, and one street was flooded. Winds estimated up to 50 m.p.h. knocked down a powerline at Ross, and a number of powerlines were blown down in San Francisco. In San Lorenzo two areas were inundated with 6 to 8 inches of water. The Russian River rose to a crest of 13.55 feet at Guerneville washing out beach facilities and refreshment stands prepared for the summer season. The Kaweah and St. Johns Rivers threatened to flood Visalia, and approaches to the Dinel Bridge above Three Rivers were washed out. A rock slide derailed the Western Pacific California Zephyr in the Feather River Canyon. Two of the three diesel engine units plunged 150 feet to the canyon floor, and four trainmen were injured one seriously. A slide again closed the highway at Emerald Bay on Lake Tahoe. Locally heavy rains and high winds occurred in southern California. At Crestline, San Bernardino County, an unofficial measurement of 5.12 inches of rain in 10 hours was reported. Strong winds lashed the coast, and a pleasure cruiser with 12 passengers was grounded on Anacapa Island; however, no loss of life or injuries were reported.

On the 19th the third tornado ever to be seen in the Fresno area swung down to earth briefly at 8:18 a.m. lasting until 8:23 a.m. It was observed at the Fresno Weather Bureau Airport station and by a local pilot. Clouds were broken and rainshowers had just ended. No unusual noise was heard by the observers, but the occupant of one of the damaged houses reported a roaring noise. The funnel cloud was vertical when it was first observed, but it looped just before breaking up. The tornado ripped shingles from homes and uprooted a tree.

++ FASTEST OBSERVED ONE MINUTE WIND SPEED. THIS STATION IS NOT EQUIPPED WITH AUTOMATIC RECORDING WIND INSTRUMENTS.

WEATHER SUMMARY (Continued)

On the 22d to 23d a small storm developed in southern Nevada and southeastern California causing numerous thunderstorms and hail in the north and central Sierra, lower Sacramento Valley, and rainshowers in southern California mountains and in the southeastern desert areas. Hail the size of marbles fell in Sacramento during the evening of the 22d, and a brief hailstorm in the northern districts of San Bernardino occurred on the morning of the 23d. Heavy rains in Redlands caused flooding on two street intersections.

On the 27th to 29th a low pressure trough in northern and central California caused thunderstorms and locally strong winds. Hail fell at Lake Spaulding in Nevada County and Vinton, Plumas County. Many lightning strikes occurred in Fresno County starting a brief fire in Fresno, a small blaze in the Sierras, and burned several acres of grain and grass near Riverdale and Huron.

Maurice P. Bergerson
Climatologist
U. S. Weather Bureau
San Francisco, California

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in Table 2 became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Long-term means from which departures are computed are based on 10 years or more of record ending generally with data for 1950.

Long-term means for full-time stations (those shown in the Station Index as "U. S. Weather Bureau") are based on the period 1921 - 1950, adjusted to represent observations taken at the present location.

Water equivalent values published in Table 7 are the water equivalent of snow, sleet or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snow pack result in apparent inconsistencies in the record.

Entries of snowfall in Tables 2 and 7, and in the Seasonal Snowfall table, include snow and sleet. Entries of snow on ground includ snow, sleet, and ice.

Data in Tables 3, 5, 6, and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. The Station Index lists observation times in local standard time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and C.A.A. Stations. For these stations snow on ground values are at 4:30 a.m. PST, except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB which are taken at 6:00 a.m. PST.

- No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. Consult the annual issue of this publication for interpolated monthly precipitation totals.

\+ And also on a later date or dates.

* Amount included in following measurement, time distribution unknown.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

// Gage is equipped with a windshield.

AM Data based on an observational day ending before noon.

AR This entry in time of observation column in Station Index means after rain.

B Adjusted to a full month.

C In the "Refer to Tables" column in the Station Index the letter "C" indicates recorder stations. These stations are processed for special purposes and are published later in "Hourly Precipitation Data".

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

G In the "Refer to Tables" column in the Station Index the letter "G" indicates Daily Soil Temperatures are published.

M One or more days of record missing; if average value is entered, less than 10 days' record is missing. See Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in "Hourly Precipitation Data".)

S Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace, an amount too small to measure.

V Includes total for previous month.

VAR This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

ASHEVILLE: 1957

WEATHER SUMMARY

The weather over California was both warmer and drier than usual for June. The passage of a relatively weak storm front over the State on the 9th and 10th was responsible for most of the June rainfall and for about the only cool weather during the month. During the remainder of the month the presence of a rather persistent high pressure center over the eastern Pacific resulted in a considerable number of days with above average temperatures at nearly all reporting stations, and caused rapid snowmelt in the higher mountains. Streams ran bank-full in the Bishop area and highways were flooded in several places. Reports from the State Climatologist's office in San Francisco indicated that unusually high temperatures and low humidity from the 17th to 26th in southern California resulted in considerable sunscald and heat damage to walnuts, avocados, strawberries, string beans, and avocado foliage, and increased the drop of the citrus set. There was a 40 percent loss to string bean crops in San Diego County, a 50 percent loss to grapes in Coachella Valley, and up to $100,000 damage to strawberries in the Oxnard district. Low humidities also contributed to a high fire hazard statewide, with several bad fires occurring in southern California. On the 14th a whirlwind at the Millerton Lake National Recreation Area in Fresno County, "sounding like a jet plane" and lasting about two minutes, blew aluminum roofing and sections from a storage building as much as 400 yards.

Mean monthly temperature departures were positive at nearly every reporting station in the State, generally exceeding 3.5°. The extremes in anomaly ranged from -2.0° at Tehachapi to +7.2° at Kettleman Station. Substantial warming was widespread during the first six days of June, and from the 16th to 29th with mean daily temperatures 15° to 20° above average. Highest maximum temperatures were recorded in central and northern California most often on the 23d, 24th, and 25th; whereas in southern portions they most often occurred on the 17th, 18th, and 19th. This was the fourth warmest June at Bakersfield since 1900, the warmest at Bishop since 1949, the warmest of record at Burbank and Los Angeles, the second warmest at Red Bluff since 1926, and the warmest at San Francisco since 1947. Some examples of record-breaking highest daily temperatures for June included: the 104° at Los Angeles on the 18th was the highest since 1917, and 100° on the same day at Los Angeles Airport was the highest ever recorded there; the 112° at Bakersfield on the 25th was the highest ever recorded at the airport; and the 97° at San Diego on the 18th was also the highest of record. Daily maximums exceeding 120° occurred in the desert regions of southern California -- Palm Springs 121° on the 24th and 25th, Greenland Ranch 121° on the 26th and 28th, and Cow Creek 123° on the 25th, 26th, and 27th. Cooler weather occurred on various days generally from the 7th to 15th, dropping to as much as 14° below daily averages. The lowest minimum was 19° at White Mountain 2 on the 15th. Mean monthly temperatures ranged from a high of 99.2° at Cow Creek to a low of 40.5° at White Mountain 2.

Precipitation was very light statewide with the only appreciable amounts falling on the 9th and 10th. Measurements from this storm were essentially less than 0.50 inch although somewhat heavier amounts fell in the higher mountains. Only two stations received monthly totals in excess of an inch -- Pit River Power House 5 measured 1.04 inches and Cuyamaca measured 1.05 inches. The entire 1.05 inches at Cuyamaca was measured on the 10th and this was the greatest daily catch in the State. The last half of June was almost rain free throughout California with only a few widely scattered showers falling in the mountains during the last week, mostly in southern California. Over 100 stations received no measurable precipitation all month.

According to reports of the California Weekly Weather and Crop Bulletin and the California Crop and Livestock Reporting Service, the average condition of ranges and livestock was very good, remaining a few points above the 10-year average. The good condition of livestock was expected to continue during the summer months because of the better-than-average ranges and pastures. Warmer weather accelerated the growth of nearly all vegetable and fruit crops but at the same time also favored increased insect activity, especially alfalfa aphids in Imperial County. The grasshopper invasion was under control in Tehama County, but in Butte and Shasta Counties the hoppers were getting ahead of control. Despite the local crop damage attributable to heat, high winds in the Sacramento Valley on the 5th, 7th, and 12th delaying spraying and haying activities and the light but widespread rains on the 9th and 10th being a little unseasonal, fruit and vegetable crops were coming along nicely throughout the State.

CORRECTED DATA

DECEMBER 1951	HILT SLASH DISPOSAL	TABLE 3: Accumulated monthly total should be V9.46.
NOVEMBER 1954 through JANUARY 1957	OAKLAND CITY HALL	TABLES 2, 3, and 5: Delete record for entire period indicated.
DECEMBER 1955	NAPA	TABLE 3: Precipitation on 20th should 2.12; 24th, 1.07; monthly total 15.98.
	TULELAKE 2 SE	TABLES 2 and 3: Precipitation on 8th should be 0.05; 19th, .17; monthly total 3.43; departure 2.32, and days with 0.10 or more 10; 0.50 or more 1; 1.00 or more 1. Precipitation on 24th and 25th should be on the 26th and 27th.
ANNUAL 1955	NAPA	TABLE 2: Precipitation monthly total for December should be .15.98, departure 11.06, annual total 26.59, and departure -0.15.
	TULELAKE 2 SE	TABLE 2: Precipitation monthly total for December should be 3.43, departure 2.32, annual total 10.10, and departure 0.07.
JANUARY through DECEMBER 1956	SNOW CREEK UPPER	TABLE 3: Precipitation record for period indicated should be published under Snow Creek.
JANUARY 1957	WEATHER SUMMARY	STORM NARRATIVE (Delayed Data): A funnel cloud was observed northwest of San Diego Airport and verified by Navy Aerology at North Island as a waterspout from 2:10 to 2:20 p.m. PST on January 29, 1957, dissipating as it moved toward shore. A second funnel cloud was reported in the vicinity of Mt. Soledad about 2:50 p.m.; but it did not reach the ground. No damage was reported.
FEBRUARY 1957	VALLEY CENTER 3 NE	TABLE 3: Precipitation on 28th should be .00 and monthly total 0.65.
APRIL 1957	DESCANSO RS	TABLE 3: Precipitation on 21st should be 1.00 and monthly total 2.05.
	LAKEPORT	TABLES 2 and 5: Min temperature on 25th should be 38, mean min 38.7, mean 54.6, lowest 32 on 15th, and total degree days 307.
	PLACERVILLE	TABLE 3: Remove "V" from monthly precipitation total.
	PLACERVILLE IFG	TABLE 3: Monthly precipitation total should be V10.61.
	SALYER RS	TABLES 2 and 3: Precipitation on 1st should be an accumulated amount of 1.10 and accumulated monthly total V13.02.
APRIL 1955 and PREVIOUS MONTHS	MIDDLEWATER	TABLE 5: 5° separation found in minimum thermometer at Middlewater May 3, 1955. May 1 - 3, 1955 minimum temperatures were corrected by adding 5° but April and earlier records were not corrected. Minimum temperatures about 5° too low during April 1955 and probably back to September 1954, with some evidence of existance of separation as early as February 1954.

Ø PRORATED TO PRESERVE MONTHLY TOTAL.

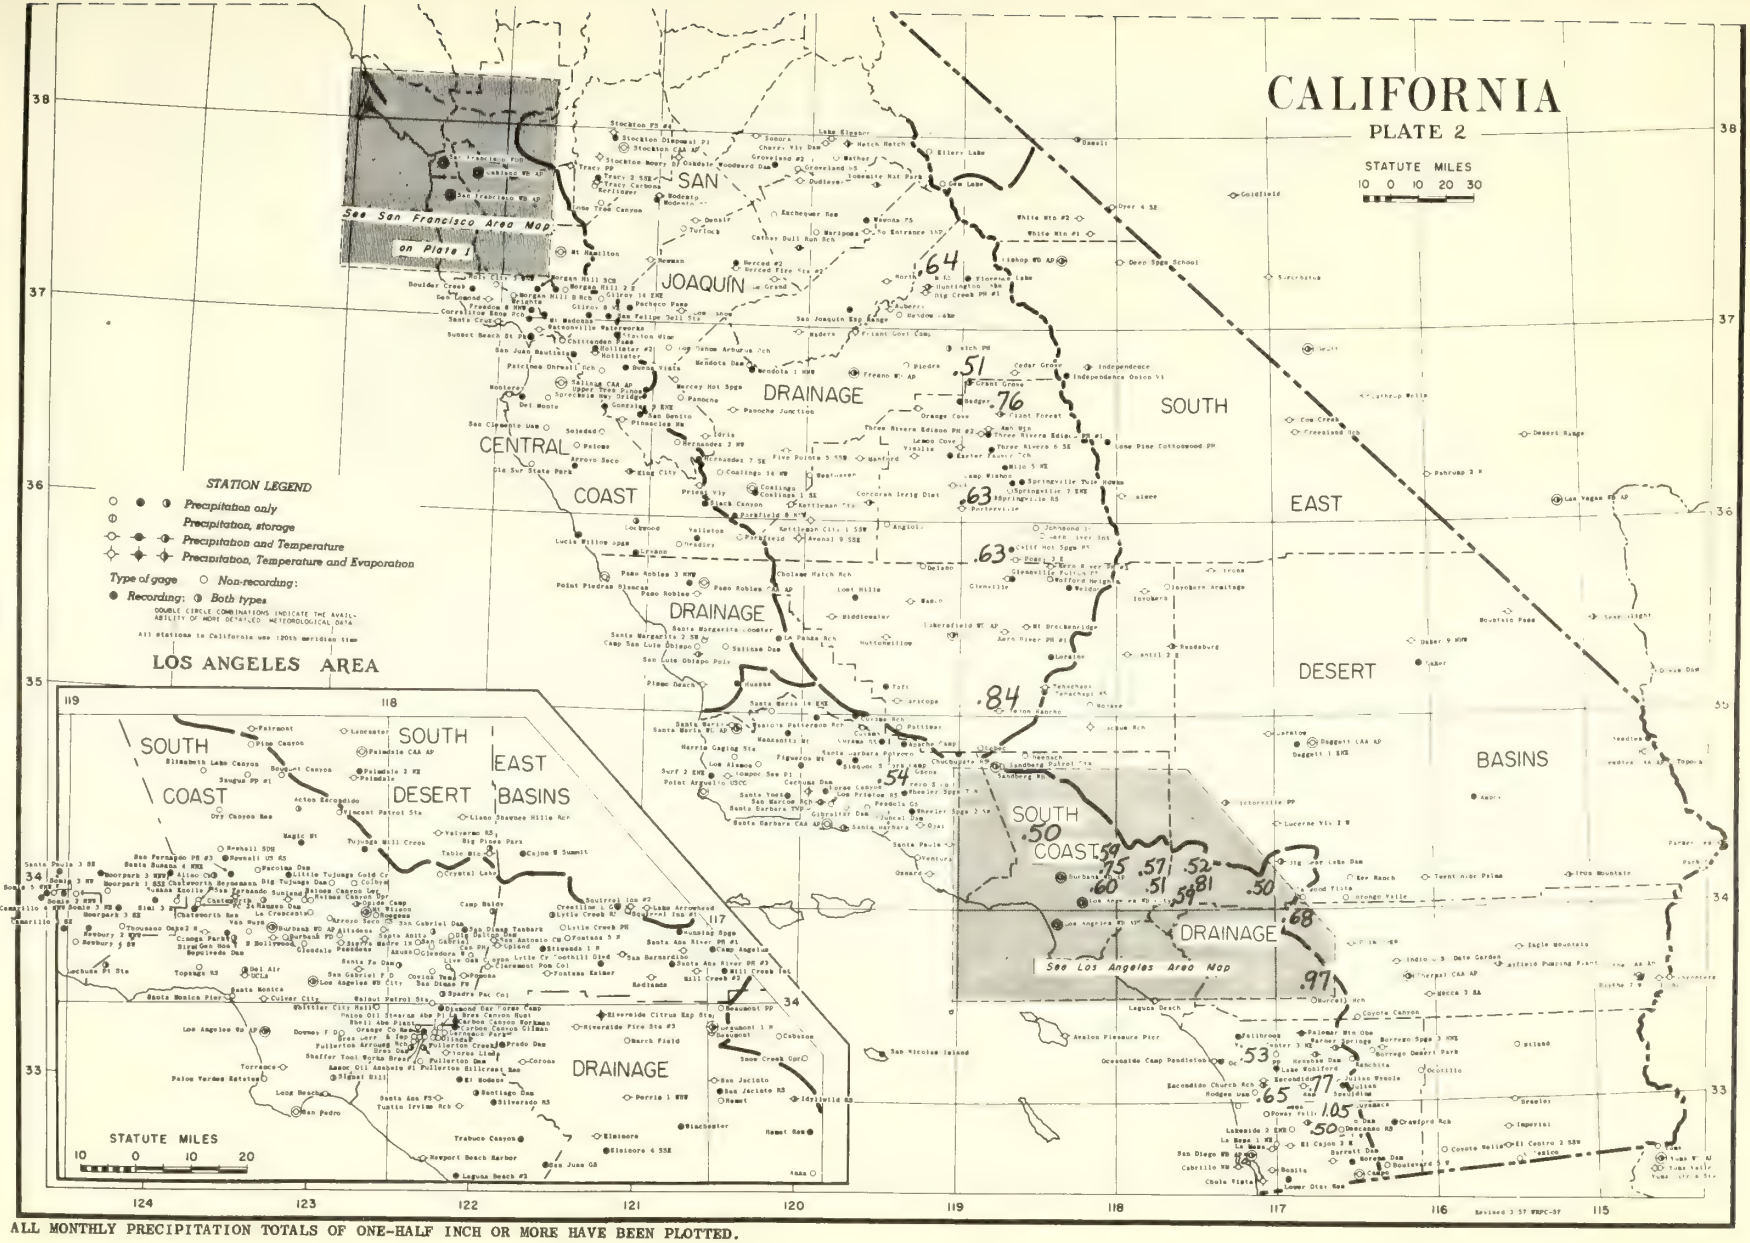
DELAYED DATA TABLE 7 WILL BE FOUND ON PAGE 196.

See reference notes following Station Index.

TOTAL PRECIPITATION

JUNE 1957

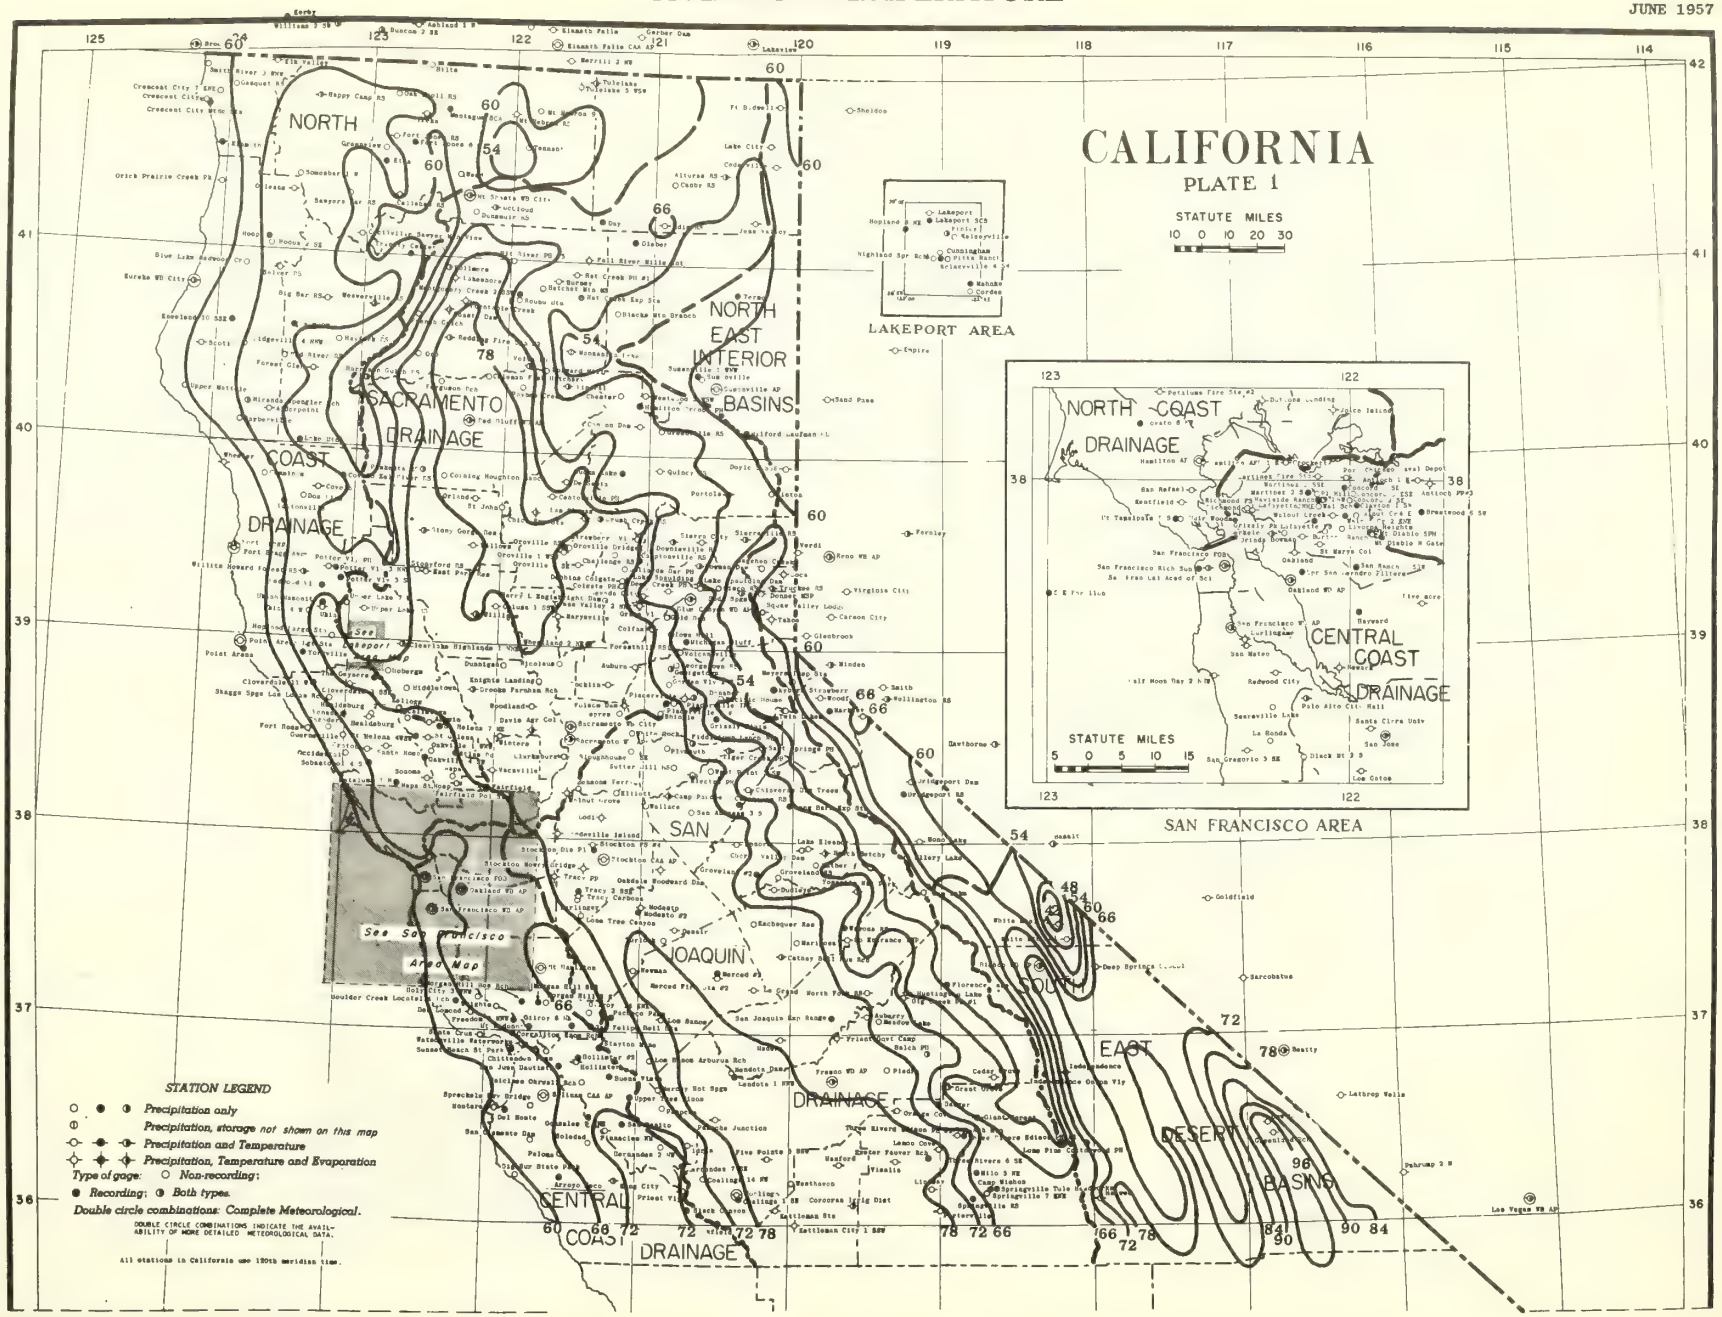
Revised 3-57 WBPC-87



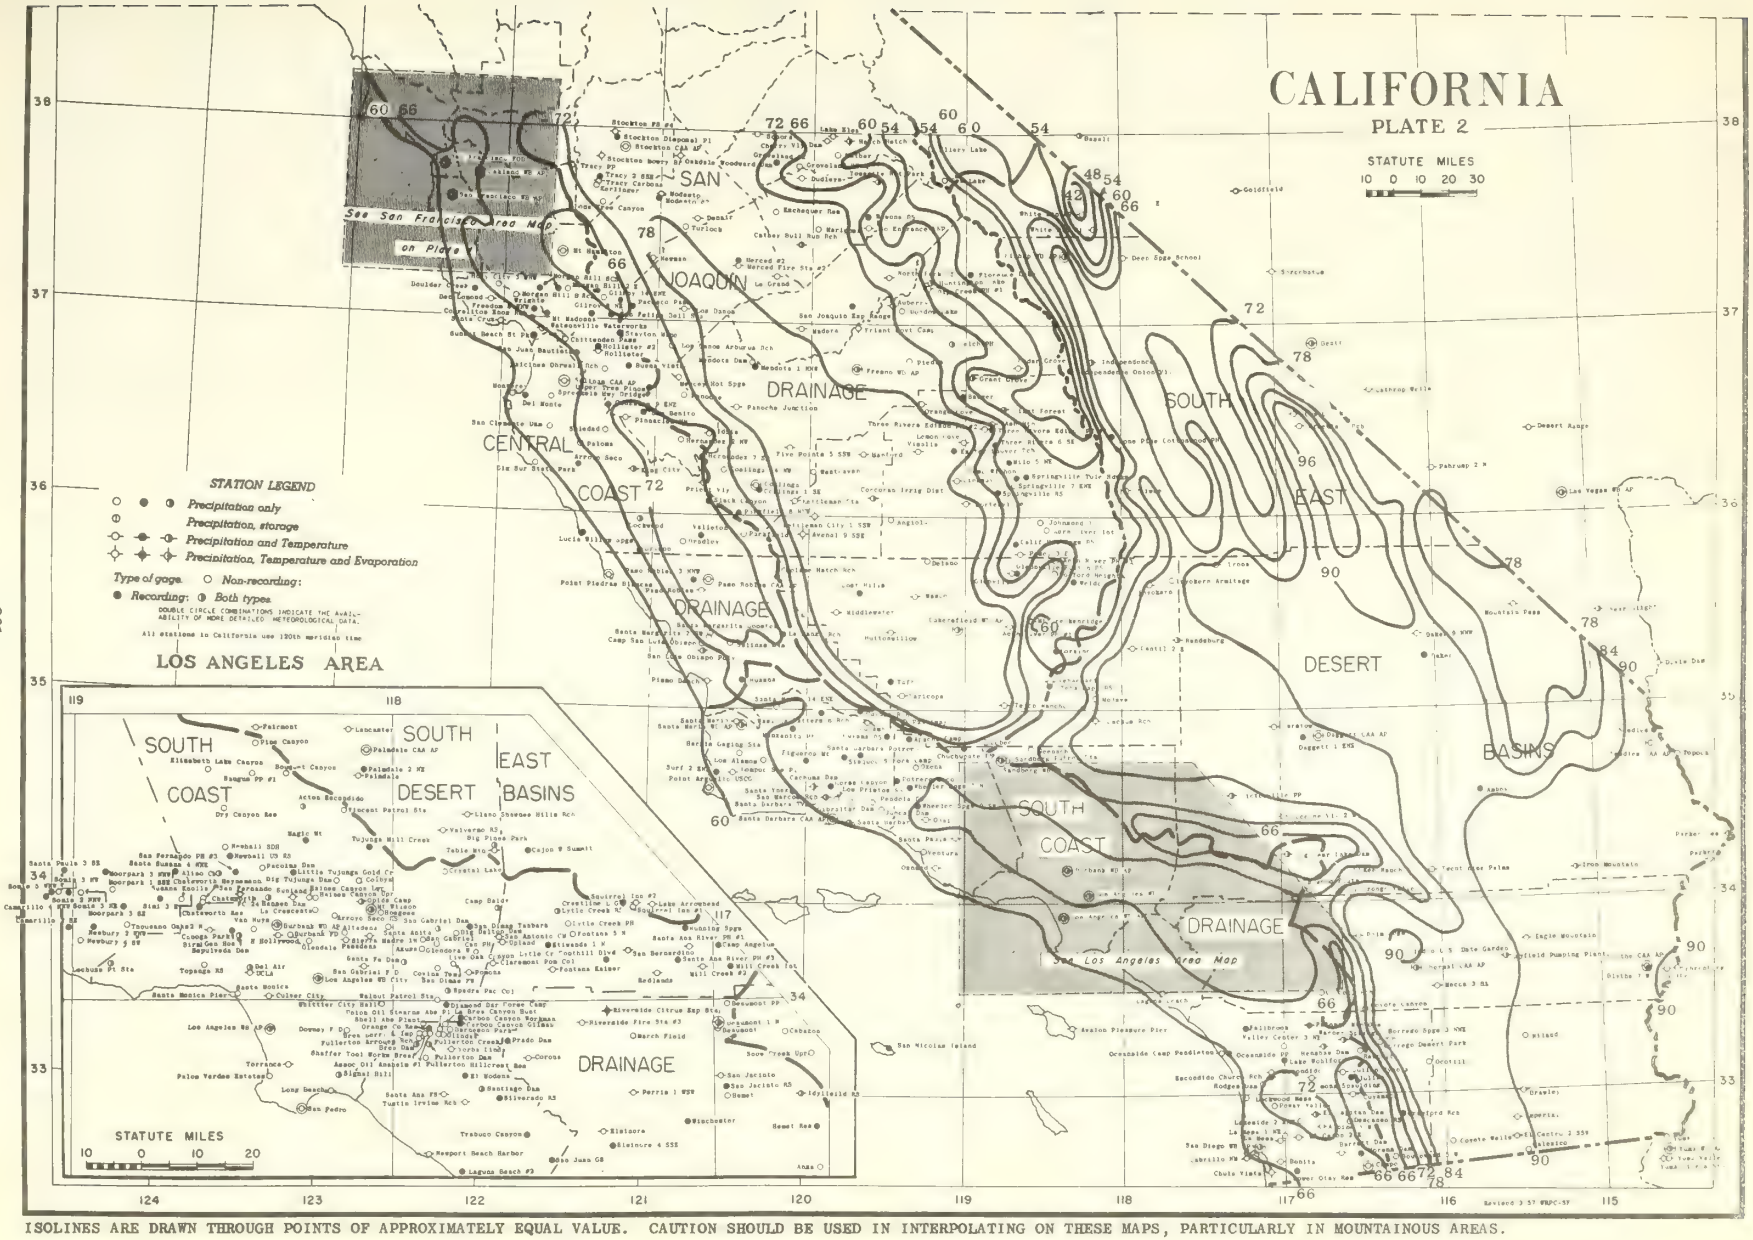
ALL MONTHLY PRECIPITATION TOTALS OF ONE-HALF INCH OR MORE HAVE BEEN PLOTTED.

AVERAGE TEMPERATURE

JUNE 1957



Revised 3-57 WBPC-SF



ISOLINES ARE DRAWN THROUGH POINTS OF APPROXIMATELY EQUAL VALUE. CAUTION SHOULD BE USED IN INTERPOLATING ON THESE MAPS, PARTICULARLY IN MOUNTAINOUS AREAS.

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 55 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulleti

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in Table 2 became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Long-term means from which departures are computed are based on 10 years or more of record ending generally with data for 1950.

Long-term means for full-time stations (those shown in the Station Index as "U. S. Weather Bureau") are based on the period 1921 - 1950, adjusted to represent observations taken at the present location.

Water equivalent values published in Table 7 are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of loca variability in the snow pack result in apparent inconsistencies in the record.

Entries of snowfall in Tables 2 and 7, and in the Seasonal Snowfall table, include snow and sleet. Entries of snow on ground inclu snow, sleet, and ice.

Data in Tables 3, 5, 6, and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. The Station I lists observation times in local standard time. During the summer months some observers take the observations on daylight saving t

Snow on ground in Table 7 is at observation time for all except Weather Bureau and C.A.A. Stations. For these stations snow on ground values are at 4:30 a.m. PST, except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB which are taken at 6:00 a.m. PST.

- No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. Consult the annual issue of this publication for interpolated monthly precipitation totals.

\+ And also on a later date or dates.

* Amount included in following measurement, time distribution unknown.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

// Gage is equipped with a windshield.

AM Data based on an observational day ending before noon.

AR This entry in time of observation column in Station Index means after rain.

B Adjusted to a full month.

C In the "Refer to Tables" column in the Station Index the letter "C" indicates recorder stations. These stations are processed for special purposes and are published later in "Hourly Precipitation Data".

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

G In the "Refer to Tables" column in the Station Index the letter "G" indicates Daily Soil Temperatures are published.

M One or more days of record missing; if average value is entered, less than 10 days' record is missing. See Table 5 for detaile daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in "Hourly Precipitation Data".)

S Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.

SS This entry in time of observation column in Station Index means observation made near sunset.

T Trace, an amount too small to measure.

V Includes total for previous month.

VAR This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CORRECTED DATA WILL BE FOUND ON PAGE 195.

WEATHER SUMMARY

The weather picture over California during July showed temperatures to be near to slightly below average, and, with a few exceptions, precipitation to be below average even for a month that is normally quite dry. There were a few local thunderstorms of note in widely separated areas -- in the vicinity of Chowchilla and Le Grand on the 6th, in the Daggett-Lenwood area on the 10th, and near Big Bear Lake and Redlands on the 11th. A description of these storms as prepared by the State Climatologist's office in San Francisco will be found at the end of this summary. The ever-present high fire danger during summertime was very much in evidence throughout the month. A grass fire burned 10,000 acres in the Modoc National Forest during the week preceding the 8th; there was an 800-acre brush fire in the Klamath Forest during midmonth; and numerous lightning strikes caused many forest and range fires and other scattered damage throughout the State. Included were power outages in the Tule Lake Basin on the 22d and in an area between Santa Maria and Zaca on the 30th. Another fire in the Shasta-Trinity National Forest was finally brought under control on the 29th after burning 1,700 acres

Except along the central and southern coastal areas where it was warmer than usual, mean monthly temperatures were generally in the -2.5° to +1.0° range, the extremes in anomaly ranging from -7.2° at North Fork Ranger Station to +5.0° at Escondido Church Ranch. Unseasonably warm weather occurred in the San Francisco Bay area as well as along the coast and coastal valleys south of Santa Barbara. San Francisco and Los Angeles Airports recorded daily mean temperatures above normal on every day of the month, Oakland above normal on all but one day, San Diego on all but two days, and Los Angeles City Office on all but four. This was the warmest July of record at Oakland since records began in 1929 and the third warmest July of record at both Los Angeles and San Diego since records began. There were no definite cool spells statewide although mountain and interior stations tended to be on the cool side on the 1st and 2d, intermittently from the 10th to 23d, and again during the last two days. Lowest minimums also were recorded on various days throughout the month, usually either on the first or last week north of the Tehachapis and from the 20th to 27th south of the Tehachapis. The lowest was 19° at White Mountain 2 on the 14th. Highest maximums were prevalent over the State during the period 3d to 6th, the highest being 122° at Cow Creek on the 5th. Mean monthly temperatures ranged from a high of 102.4° at Cow Creek to a low of 44.7° at White Mountain 2. (The report from White Mountain 2 was received too late to be published in this issue, but it will be found in the "Delayed Data" section in the December 1957 issue).

Precipitation was generally very sparse with only some stations in the northwest portion, in scattered areas in the Sierras, and local areas in the mountains and desert of southern California receiving any of consequence. Only four stations recorded monthly totals in excess of an inch -- Upper Mattole 1.02, Gasquet Ranger Station 1.18, Crescent City 7 ENE 1.29, and Klamath 1.58. A rather intense thunderstorm struck the Daggett area on the 10th dumping 0.96 inch of rain at the airport between 12:26 p.m. and 1:47 p.m. Another thunderstorm in the Big Bear Lake-Redlands area dropped 0.90 inch of rain in less than 30 minutes, mostly in 15 minutes, at Redlands. This was its greatest daily catch and also greatest monthly total of record for July. The wettest day statewide was recorded at Klamath on the 13th when 1.16 inches fell. In all, 424 stations (77 percent of all received thus far for July received no measurable precipitation.

According to reports from Department of Agricultu sources and reports of the California Weekly Weathe and Crop Bulletin, warm weather during the early pa of the month pushed the growth and development of a crops throughout the State. In the Los Angeles ar the heat was expected to cause a spotty citrus s for next year and also caused apricots to mature t rapidly and thus reduced picking efficiency. Six co secutive weeks of hot weather that had persisted the Sacramento Valley from June through the middle July damaged both the fruit and nut crops. Cotton w doing well in the San Joaquin Valley although walnu suffered considerable sunburn from the earlier Ju and July heat here as well as in the San Luis Obis area. Milder weather during the latter part of t month in the Sacramento and San Joaquin Valleys a in the Los Angeles area was favorable to most cro and was a welcome relief to agricultural workers. U favorable conditions earlier in the season result in a heavy drop of Navel oranges, and the rather lengt warm weather in citrus areas early in July result in a heavier than normal drop of fruit in Navel well as in Valencia groves. The condition of ran and pasture feed was above average in all parts of t State although considerable grasshopper damage had o curred in the southern and central San Joaquin Vall areas. The supply of dryland pasture feed appear adequate for the remainder of the season especial if fall rains hold off long enough. Stock water, thou not in abundance, appeared to be adequate for the ba ance of the season. The average condition of catt and of ranges throughout the State was generally sligh ly above average.

THUNDERSTORMS, JULY 1957

On the 6th thunderstorms occurred over the centr Sierras, and high local winds were reported in some the foothill areas. High wind gusts sweeping up t Stanislaus River Canyon tore out false work and dropp the center span of the O'Byrnes Ferry Bridge which w under construction. The winds also toppled trees large as 20 inches in diameter. In this same sto lightning and scattered hail were also responsible f some damage to orchards. At Le Grand wind gusts est mated above 80 m.p.h. lasted five to ten minutes, u rooting trees and breaking windows. Hail fell at Tah and Squaw Valley.

On the 10th excessive rains west of Lenwood, ne Daggett, on U. S. 66 and 91 caused floodwaters to co the highways with debris and temporarily halted tra fic.

On the 11th an intense local thunderstorm stru the city of Redlands with the resulting floodwate drowning a child. The heavy rain was limited to wi in the city with the outskirts receiving only trac Lightning started several forest fires in the nea mountains and sheared a 50-foot treetop at Big B that smashed the roof of a cabin. Lightning also i jured slightly a woman and her dauthter in a trai park.

† 8:00 A.M.

++ FASTEST OBSERVED ONE MINUTE WIND SPEED. THIS STATION IS NOT EQUIPPED WITH AUTOMATIC RECORDING WIND INSTRUMENTS.

See reference notes following Station Index.

Additional information regarding the climate of California may be obtained by writing to the Weather Bureau State Climatologist, 557 Federal Office Building, 50 Fulton Street, San Francisco 2, California, or to any Weather Bureau Office near you.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Divisions, as used in Table 2 became effective with data for January 1941.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F., precipitation and evaporation in inches, and wind movement in miles. Monthly degree day totals are the sums of the negative departures of average daily temperatures from 65°F.

Evaporation is measured in the standard Weather Bureau type pan of 4-foot diameter unless otherwise shown by footnote following Table 6.

Long-term means from which departures are computed are based on 10 years or more of record ending generally with data for 1950.

Long-term means for full-time stations (those shown in the Station Index as "U. S. Weather Bureau") are based on the period 1921 - 1950, adjusted to represent observations taken at the present location.

Water equivalent values published in Table 7 are the water equivalent of snow, sleet, or ice on the ground. Samples for obtaining measurements are taken from different points for successive observations; consequently occasional drifting and other causes of local variability in the snow pack result in apparent inconsistencies in the record.

Entries of snowfall in Tables 2 and 7, and in the Seasonal Snowfall table, include snow and sleet. Entries of snow on ground include snow, sleet, and ice.

Data in Tables 3, 5, 6, and snowfall in Table 7, when published, are for the 24 hours ending at time of observation. The Station Index lists observation times in local standard time. During the summer months some observers take the observations on daylight saving time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and C.A.A. Stations. For these stations snow on ground values are at 4:30 a.m. PST, except for Bishop WB AP, Blue Canyon WB AP, and Sandberg WB which are taken at 6:00 a.m. PST.

\- No record in Tables 3, 6, 7, and the Station Index. No record in Tables 2 and 5 is indicated by no entry. Consult the annual issue of this publication for interpolated monthly precipitation totals.

\+ And also on a later date or dates.

* Amount included in following measurement, time distribution unknown.

\# Thermometers are generally exposed in a shelter located a few feet above sod-covered ground; however, the reference indicates that the thermometers are exposed in a shelter located on the roof of a building.

/ Gage is equipped with a windshield.

M Data based on an observational day ending before noon.

R This entry in time of observation column in Station Index means after rain.

B Adjusted to a full month.

C In the "Refer to Tables" column in the Station Index the letter "C" indicates recorder stations. These stations are processed for special purposes and are published later in "Hourly Precipitation Data".

D Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

G In the "Refer to Tables" column in the Station Index the letter "G" indicates Daily Soil Temperatures are published.

M One or more days of record missing; if average value is entered, less than 10 days' record is missing. See Table 5 for detailed daily record. Degree Day data, if carried for this station, have been adjusted to represent the value for the full month.

R Amounts from recording gage. (These amounts are essentially accurate but may vary slightly from the amounts to be published later in "Hourly Precipitation Data".)

S Storage precipitation station. Precipitation measurements, made at irregular intervals, will be published in the July or August or delayed data December issue of this publication.

S This entry in time of observation column in Station Index means observation made near sunset.

T Trace, an amount too small to measure.

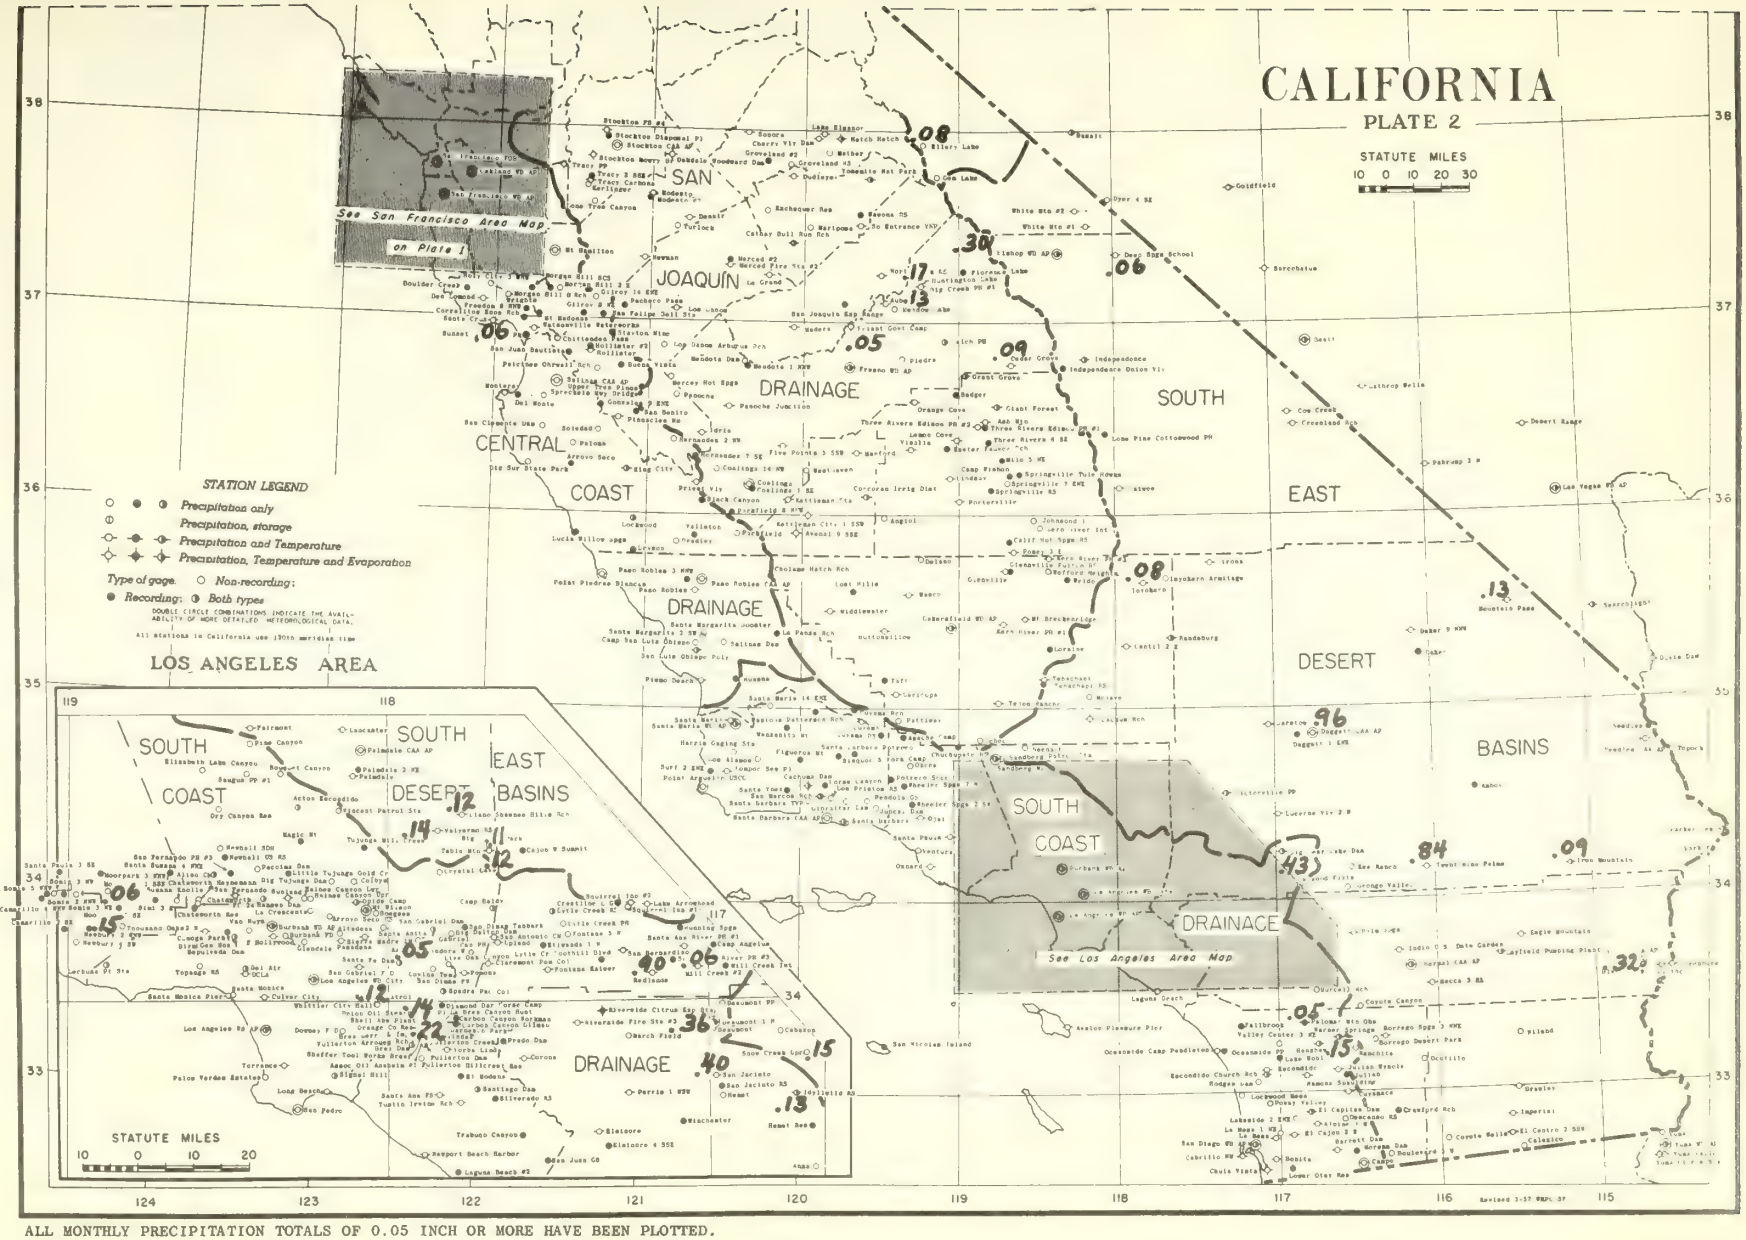
V Includes total for previous month.

R This entry in time of observation column in Station Index means variable.

Subscription Price: 20 cents per copy, monthly and annual; $2.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Superintendent of Documents. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

TOTAL PRECIPITATION

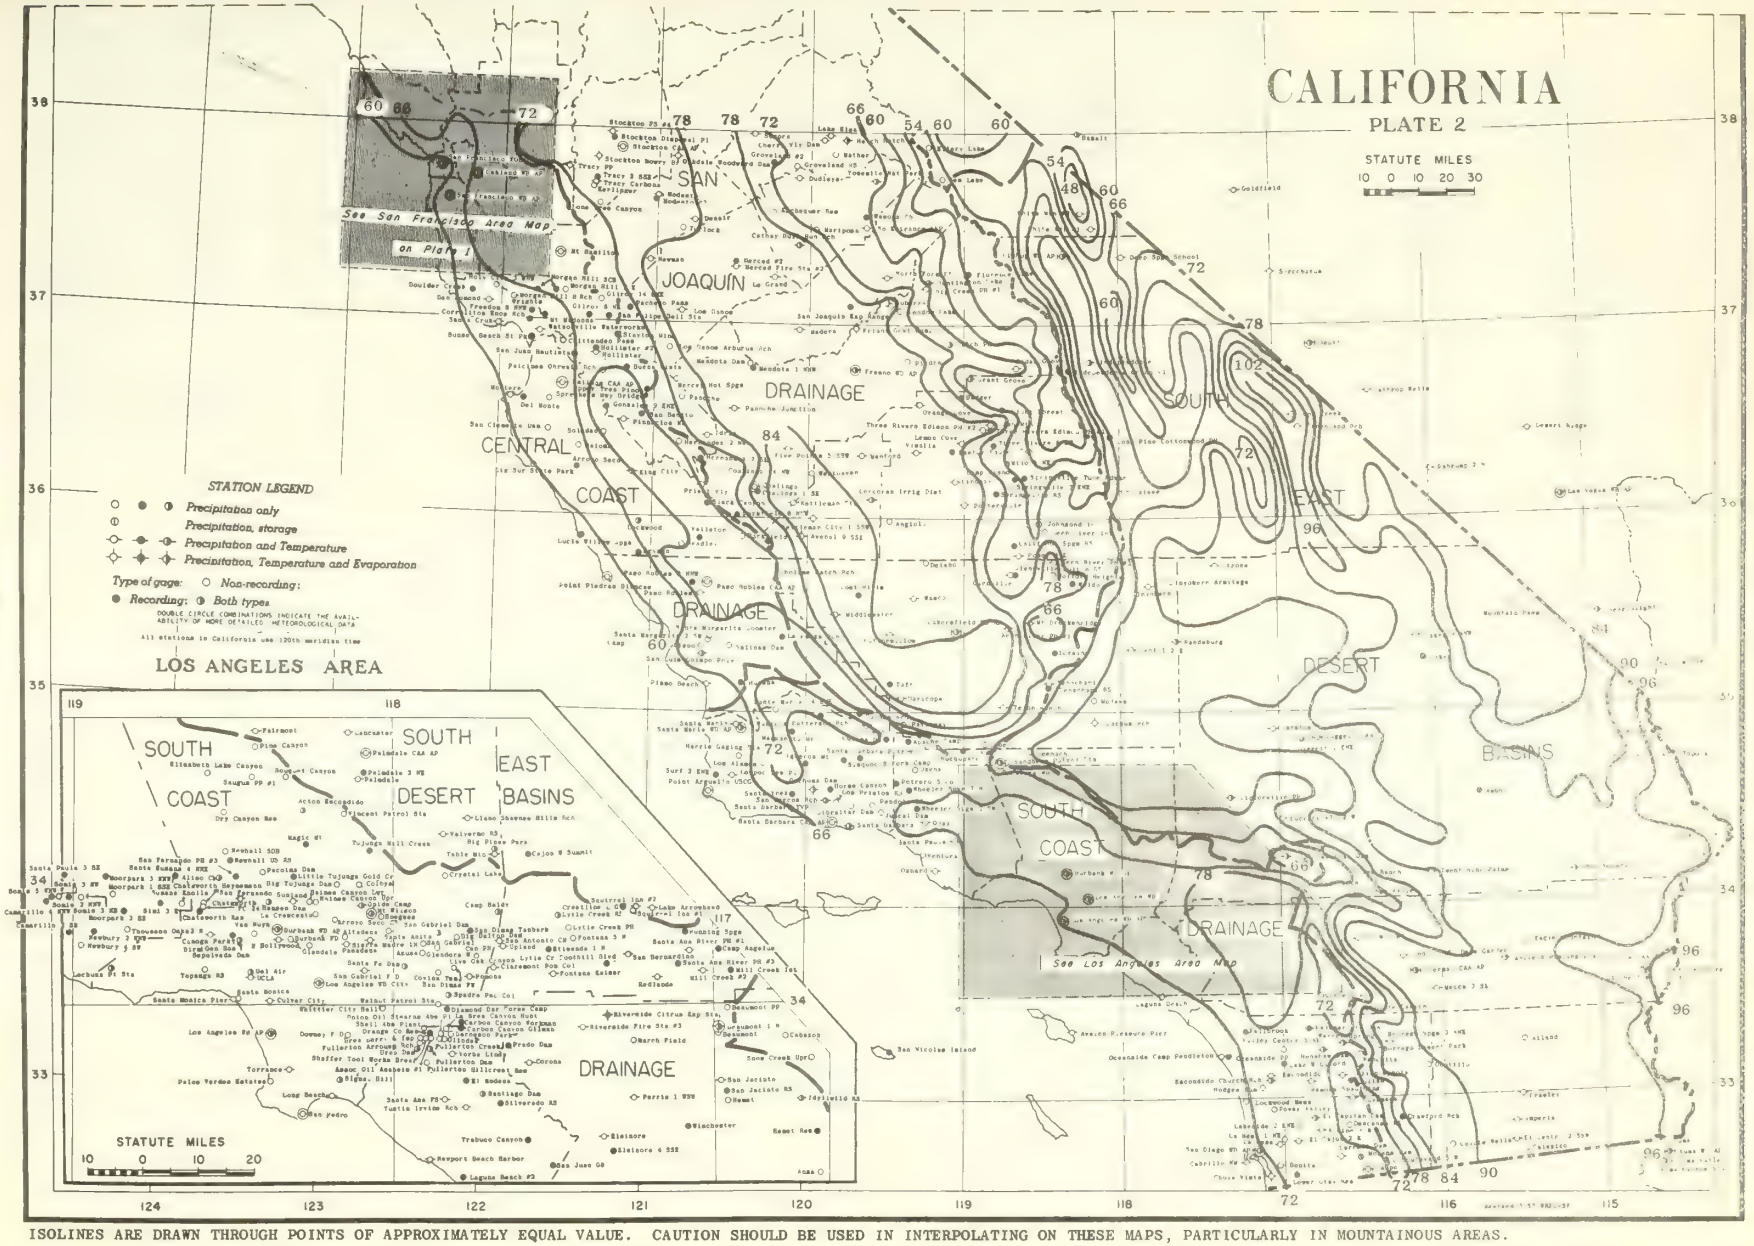
JULY 1957



ALL MONTHLY PRECIPITATION TOTALS OF 0.05 INCH OR MORE HAVE BEEN PLOTTED.

AVERAGE TEMPERATURE

JULY 1957



ISOLINES ARE DRAWN THROUGH POINTS OF APPROXIMATELY EQUAL VALUE. CAUTION SHOULD BE USED IN INTERPOLATING ON THESE MAPS, PARTICULARLY IN MOUNTAINOUS AREAS.

AUGUST 1957
Volume LXI No. 8

ASHEVILLE: 1957

WEATHER SUMMARY

The weather picture over California for August showed little or no rainfall over most of the State except for cloudbursts locally in the southeastern portion, and temperatures somewhat below average over all sections except in the southern California coastal and interior valleys. A description of the severe thunderstorm activity in the southeast will be found following this summary. A few scattered thunderstorms occurred in the higher mountains over the rest of the State, but the accompanying rainfall was light. Above-average percent of possible sunshine was received up and down the coast, with the most notable positive departures occurring from San Francisco northward. As a result, Eureka reported this to be one of its seven warmest Augusts of record and San Francisco had its second sunniest August of record. The fire danger remained relatively high over the State with numerous smaller fires reported in the northern half and several larger ones in the southern half.

This was one of the cooler Augusts over the State as a whole; however in the South Coast Drainage, stations with long-term means showed a preponderance of positive mean monthly temperature departures, making this the third consecutive month of above average temperatures. Negative departures were dominant over the rest of California. Departure extremes ranged from -6.7° at Hat Creek Power House #1 to +4.5° at Escondido Church Ranch. No pronounced heat waves were in evidence in the northern three-quarters of the State although highest maximums occurred most often during the 1st to 5th and again from the 16th to 18th; the highest was 108° at Avenal 9 SSE on the 4th. South of the Tehachapis daily temperatures remained above average nearly every day although no departures exceeded +9°. The high incidence of above-average temperatures made this the second warmest August of record at Burbank, the warmest at both Los Angeles City and Airport, and the third warmest at San Diego. The highest temperature in the State was 122° at Cow Creek on the 17th. North of the Tehachapis cooler weather was more prominent from the 4th to 11th at interior stations and during the last week at all stations. The only break in the warm weather in southern California was generally on the 29th and 30th. Lowest temperature statewide was 18° at Boca on the 30th. This was one of the six lowest minimums ever recorded in California during August. Mean monthly temperatures ranged from a high of 98.9° at Greenland Ranch to a low of 44.5° at White Mountain 2.

Although this was a dry month even for August, past Augusts have been drier. The rather intense but brief thunderstorm activity in the southeast was brought about by an influx of warm, moist, unstable air from as far as the Gulf of Mexico that moved as far north as the Fresno area. The rain itself occurred on the 11th, 13th, and 19th to 20th. Blythe received the greatest daily catch, 1.53 inches, on the 19th, all of it falling within a very short time. The wettest station in the State was Mountain Pass, also in the Southeast Desert Basins, where the monthly total was 1.82 inches. No station in either the Sacramento or San Joaquin Valleys reported any measurable rain for the month, and of the 567 stations in the State sending in records to date, no measurable rain fell at 90 percent of them.

Department of Agriculture sources and the California Weekly Weather and Crop\Bulletin indicated that yield prospects continued to be favorable for field crops now growing; however, prospects declined for some beans, hops, and certain potatoes. The relatively cool weather in both the Sacramento and San Joaquin Valleys was favorable for crops there and also for the agricultural workers in the fields. The much-above-average temperatures in the Los Angeles and San Diego areas necessitated continued heavy irrigation, taxing irrigation water storage and wells. Most fruit and vegetable crops ripened rapidly as a result of the warm weather which was also responsible for only fair to poor condition of new Navel and Valencia oranges that showed considerable dropping. Showers in the southeastern desert regions damaged some of the alfalfa and the resulting higher humidity was conducive to increased insect activity. The weather was also oppressive for prolonged hand picking of cotton. Crops over the rest of the State made good gains under almost ideal weather. Stock water supplies were generally adequate and the supply of dry grass was ample to carry the usual number of stock into fall, and to provide good protection for new grass when fall rains begin. The reported condition of both range feed and cattle was slightly above the 10-year average.

San Francisco, California

THUNDERSTORM ACTIVITY, AUGUST 1957

On the 11th a severe thunderstorm with an accompanying flash flood knocked out powerlines from Palm Springs to Palm Desert, and partially closed State Highway 111. The storm was concentrated near Rancho Mirage, nine miles east of Palm Springs, where five power poles were toppled and water poured across the highway.

On the evening of the 13th a severe thunderstorm, concentrated on the west side of Needles, lasted more than one and one-half hours. Television antennas, signs, power and telephone lines were torn loose, and lightning struck several transformers causing power outages in many sections of the city. Roofing was torn from the high school auditorium and one of the classroom wings, flooding some of the classrooms. Superstructures and air vents were also swept away by the wind that caused considerable damage to the coolers.

On the 19th, an intense thunderstorm with locally heavy rains and high winds caused damage over a wide area from southern portions of Imperial Valley northward to the Riverside County line. Winds downed telephone and powerlines and damaged television antennas. Many dips on Highways 99 and 111 were full of water, and highway traffic was disrupted in many places. Highway 111 was partially closed when mud several feet thick drifted across the route. At least one highway accident was attributed to the storm that occurred east of Holtville, injuring seven people. Heaviest reported rain, 0.62 inch, fell east of Calexico.
